Preface

Introduction p. 1

Introduction p. 7

A Prototypical Model of Charge-Density-Wave Formation p. 8

Modulated Structures of the NbTe[subscript 4] Series of Compounds p. 21

Conclusions p. 31

Layered Transition Metal Dichalcogenides p. 35

Hyperfine Techniques p. 35

Structure of Layered Transition Metal Dichalcogenides p. 54

Compounds with Octahedral Metal Coordination p. 56

Compounds with Trigonal Prismatic Metal Coordination p. 85

Compounds with Mixed Metal Coordination p. 106

Nuclear Spectroscopy Studies of Quasi-one-dimensional Transition Metal Chalcogenides p. 113

Introduction p. 113

NbSe[subscript 3] p. 125

Monoclinic TaS[subscript 3] p. 155

Tetrachalcogenides p. 165

Conclusions p. 169

Nuclear Spectroscopy of Charge Density Waves in Molybdenum Bronzes p. 177

Introduction p. 177

Physical Properties of the Blue Bronzes p. 178

NMR in the Normal State p. 187

Nuclear Spectroscopy of Pinned CDW p. 190

Dynamics in the Pinned CDW p. 202

NMR in the Sliding CDW State p. 206

Conclusion p. 222

NMR Studies of the Quasi One-dimensional Inorganic Complex Salt K[subscript 2]Pt(CN)[subscript 4]Br[subscript 0.3]3.2H[subscript 2]0 (KCP) p. 229

Introduction p. 229

Properties of KCP p. 230

NMR Investigations in KCP p. 237

Conclusions p. 270

High Resolution NMR on Organic Radical Salts p. 275

Introduction p. 275

Solid State Theory of Radical Salts p. 276

High Resolution Techniques p. 280

Magnetic Electron Nuclear Interaction p. 283

Experimental Results p. 288
