Preface

List of Contributors

Quantitative coronary arteriography (QCA) versus other modalities
A pathologist's view of quantitative coronary arteriography p. 3
Angioscopy versus angiography for the detection of coronary artery disease surface morphology p. 15
Development and application of coronary intravascular ultrasound: comparison to quantitative angiography p. 29
QCA: cinefilm versus digital arteriography
Quantitative analysis of the cineangiogram: Why bother? p. 55
Quantitative coronary arteriography: equipment and technical requirements p. 75
The filmless catheterization laboratory: when will it be reality? p. 113

Quality control in QCA
Optimal frame selection for QCA p. 125
Variability of QCA-core laboratory assessment of coronary anatomy p. 137
Automated physical assessment of image quality in digital cardiac imaging p. 161
Experiences of a quantitative coronary angiographic core laboratory in restenosis prevention trials p. 177

Coronary blood flow and flow reserve
Flow and flow reserve by parametric imaging p. 195
Maximal myocardial perfusion as a measure of the functional significance of coronary artery disease p. 213
Angiographic measurement of coronary blood flow p. 235

QCA in regression/progression of atherosclerotic disease
Value and limitations of quantitative coronary angiography to assess progression or regression of coronary atherosclerosis p. 255
The impact of the calcium antagonist nifedipine on the angiographic progression of coronary artery disease - results of INTACT (International Nifedipine Trial on Anti-atherosclerotic Therapy) p. 273
Progression and regression of coronary atherosclerosis: data from a controlled clinical trial with Nicardipine p. 285
Computer quantitative measurements of CLAS coronary angiograms compared to evaluation by panels of human angiographers p. 299
A maximum confidence strategy for measuring progression and regression of coronary artery disease in clinical trials p. 311

QCA in restenosis studies
Pharmacological prevention of restenosis after percutaneous transluminal coronary angioplasty (PTCA); overview and methodological considerations p. 329
CARPORT - Coronary Artery Restenosis Prevention On Repeated Thromboxane Antagonism (51 A multicenter randomized clinical trial p. 351
Angiotensin converting enzyme inhibition in the prevention of restenosis: the MERCATOR and MARCATOR trials p. 365
Historic. A multicenter randomized clinical trial to evaluate feasibility and tolerability of recombinant congener of hirudin as an alternative to heparin during PTCA p. 373

Angiopeptin in experimental models of restenosis p. 377
Cyclic flow alterations and neointimal proliferation following experimental coronary stenosis and endothelial injury p. 385
QCA after recanalization techniques in coronary arteries
The use of quantitative coronary angiography (QCA) in interventional cardiology p. 397
Quantitative coronary arteriography in laser balloon angioplasty p. 443
Quantitative coronary angiography after directional coronary atherectomy p. 459
Directional coronary atherectomy evaluation by quantitative angiography p. 473
Quantitative results and lesion morphology in coronary excimer laser angioplasty p. 485
Percutaneous transluminal coronary rotational ablation: early follow-up at 24 hours by quantitative angiography p. 497
Quantitative assessment of the residual stenosis after percutaneous transluminal coronary rotary ablation: European experience p. 515
Quantitative coronary angiography after revascularization with the Transluminal Extraction - Endarterectomy Catheter (TEC) p. 525
QCA and intracoronary prostheses
An experimental cardiologist's view on coronary stents p. 537
The Palmaz-Schatz stent p. 553
The Wallstent experience: 1986-1990 p. 567
Immediate and long-term clinical and angiographic results following Wiktor stent implantation in patients with documented restenosis of a native coronary artery lesion following prior balloon angioplasty p. 593
Coronary Gianturco-Roubin Stents p. 609
Index p. 625
