Preface

Projects - Requirements

Requirements for facilities and measurement techniques to support CFD development for hypersonic aircraft p. 1

Hermes measurement needs in hot facilities p. 11

Hot experimental technique: a new requirement of aerothermodynamics p. 25

Experimental validation of hypersonic viscous flow models p. 41

Computation and experimentation of free-piston shock tunnels - Example of the Marseille facility p. 51

Ground test facilities and instrumentation for aerothermal and aero-optical studies of hypersonic interceptors p. 65

Interferometry - Spectroscopy

Interferometry in rarefied gas flows p. 75

Holographic interferometry on the high enthalpy shock tunnel in Gottingen (HEG) p. 87

The use of holographic interferometry for flow field diagnostics p. 97

Multipass holographic interferometer for the high enthalpy hypersonic wind-tunnel F4 p. 113

Resonant holographic interferometry; a multipoint, multiparameter diagnostics tool for hypersonic flow p. 123

Schlieren device and spectroscopic measurements in F4 p. 135

Considerations for the application of the infrared emission absorption technique to hypersonic propulsion diagnostics p. 151

Molecular electronic resonance state techniques p. 161

Temperatures - Concentrations

Local non-intrusive measurements of the inlet and exhaust flows in ground testing a hypersonic engine p. 171

Laser-based diagnostics for hypersonic flows p. 185

Determination of minority species concentrations and temperature in combustion systems by Laser Induced Fluorescence p. 195

Absorption, scattering, and fluorescence techniques for hypersonic flow measurements p. 205

Spectroscopic diagnostic techniques for the high enthalpy shock tunnel in Gottingen (HEG): preparatory LIF studies on other facilities p. 215

Rotational temperature and density measurements in a hypersonic flow by dual-line CARS p. 225

Laser spectroscopic measurement techniques for hypersonic, turbulent wind-tunnel flows p. 235

Broad band excimer Laser Induced Fluorescence applied to hypersonic and supersonic air flows p. 245

Non-intrusive temperature determination by LIF in hypersonic wind-tunnels p. 255

Rapid pulse electron beam fluorescence for flow field diagnostics p. 265

Electron beam fluorescence imaging for hypersonic research p. 275

Pressure - Forces

Force measurement in hypervelocity impulse facilities p. 285

A six component balance for short duration hypersonic facilities p. 295
Millisecond aerodynamic force measurement technique for high enthalpy test facilities
Aerodynamic force measurements in the VKI longshot hypersonic facility

Velocity
Measurement of hypersonic flows
Development and assessment of an LDV system for Mach 6 flow field measurements
Laser velocimetry applied in hypersonics
Velocity and density determination by the electron beam technique
Electron beam velocimetry
Planar velocimetry in high-speed aerodynamic and propulsion flowfields
Filtered Rayleigh and RELIEF imaging of velocity, temperature and density in hypersonic flows for the study of boundary layers, shock structures, mixing phenomena and the acquisition of in-flight air data
2D velocity and temperature measurements in high speed flows based on spectrally resolved Rayleigh scattering

Heat Flux
Temperature and heat flux measurements challenges for high temperature aerospace application
Heat transfer measurement techniques used or in development at ONERA Chalais-Meudon

Aerothermodynamic measurement techniques employed in NASA Langley hypersonic facilities
Aerothermal test methodology and techniques for the development of hypersonic vehicles
Measurements on models for hypersonic real gas conditions
Thin gradient heat fluxmeters developed at ONERA

Infrared Thermography
Hydrosonic aerodynamics research with an infrared imaging system
Heat transfer measurements using infrared thermography in rarefied flows
Infrared thermography for hot-shot wind-tunnel
Experiments on the catalytic efficiency of heat protection materials in the arc heated wind-tunnel (LBK) in Cologne
Infrared Thermography characterization of Görtler vortex type patterns in hypersonic flows

Recommendations for Future Research by the Rapporteurs
Introduction to session 7: Recommendations for future research in hypersonic instrumentation
Flow visualization, interferometry and spectroscopy in hypersonic flows: a review

Local measurements of temperatures and concentrations: a review for hypersonic flows
Pressure and force measurement on models set in hypersonic flows: a review
Velocity measurements in hypersonics: a review
Thermal flux measurements in hypersonic flows: a review
