Editorial overview

Retrotransposons and the evolution of mammalian gene expression

Intragenic suppression: Stalker, a retrovirus-like transposable element, can compensate for a deficiency at the cut locus of Drosophila melanogaster

The splicing of transposable elements and their role in intron evolution

A model for the maintenance of RLE-mediated regulatory variation in natural populations

The population biology and evolutionary significance of Ty elements in Saccharomyces cerevisiae

Population genetics of transposable DNA elements: A Drosophila point of view

Genomic distribution of transposable elements among individuals of an inbred Drosophila line

Genome canalization: The coevolution of Transposable and Interspersed Repetitive Elements with single copy DNA

Evolutionary dynamics of transposable elements in prokaryotes and eukaryotes

Transposable elements and the evolution of genome organization in mammals

Horizontal transfer of P elements and other short inverted repeat transposons

I elements and the Drosophila genome

The transposable element hobo in Drosophila melanogaster and related species

The role of the transposable element hobo in the origin of endemic inversions in wild populations of Drosophila melanogaster

Transposable DNA elements and life history traits I. Transposition of P DNA elements in somatic cells reduces the lifespan of Drosophila melanogaster

The retrotransposon family micropia in Drosophila species

Genetic instability and rapid speciation: are they coupled?

Tyl-copia group retrotransposons and the evolution of retroelements in the eukaryotes

Evolution of the transposable element Uhu in five species of Hawaiian Drosophila

Evolution of the transposable element mariner in the Drosophila melanogaster species group

Arabidopsis and cotton (Gossypium) as models for studying copia-like retrotransposon evolution

Evolution of Ac and Dsl elements in selected grasses (Poaceae)

Natural genetic engineering
