Preface
Acknowledgements
Introduction
Analysis of the setting up of a concurrent engineering scenario p. 3
Failure-sensitive Product Development p. 13
A language for the modeling of the design process in mechanical engineering p. 23
CAD/analysis integration. (An object-oriented approach) p. 31
Rethinking CAD tools through their use? p. 41
Product/Manufacturing : A systemic approach for simultaneous engineering p. 51
On a genetic multiobjective approach for the integration and optimization of assembly product design and process planning p. 61
Manufacturing Flexibility : A New Evaluation p. 71
Integrated CAD and CAPP around feature recognition techniques p. 83
Feature-State approach for operation sequence generation p. 93
Machining features : integration of the machining function in the modelling of parts for automated process planning p. 103
Expression and recognition of design intentions. The contributions of multimodality p. 113
Integration of the machining point of view in the product modelling : the fixturing features p. 121
From design to manufacturing of forged parts : automatic process planning for dies and parts p. 131
Tools for optimal or near-optimal sensors locations p. 143
Fully integrated finite element models in the design and manufacture of glass products p. 153
Maestro : a module dedicated to the integration of structural analysis within the design process p. 163
Thickness optimization of beams and shells with large displacements p. 173
Quality control of finite element analyses in shape optimization p. 183
Methods and softwares for the automation of finite element analyses in 3D p. 193
UsyCaMs : A software package for the interactive synthesis of cam mechanisms p. 205
Workspace-oriented methodology for designing a parallel manipulator p. 215
Design of robotic work cells : synthesis and application p. 225
A tool for robot design : feasible trajectory from a singularity p. 235
Sensitivity analysis for optimisation of flexible multi-body systems p. 245
Dynamic modelling of mechanisms. Qualifying of three integration schemes p. 255
Thermal analysis of orthogonal cutting. Simulation and Experiments p. 267
A systematic approach to the surface modelling of forged parts p. 277
Simplified stamping simulation : an aid for component design p. 287
Mechanical simulation of machining p. 297
Thermal modal analysis and modelling of machine-tools p. 307
Fixture design process modelling p. 317
Integrating design and manufacturing by tolerance chart analysis p. 329
The TTRE : Micro tolerancing Model for CAD-CAM Modelers p. 339
Models for tolerancing process by considering mechanism flexibility p. 349
Probe definition for inspection of mechanical parts by CMM p. 357
Integrated design and manufacturing for precision mechanical components p. 367
Choice of machine tool configuration. Determination of real visibility p. 379
Flank milling of ruled surface with additionally-five-axis CNC machine p. 389
Synthesis of reconfigurable-Fixture support configurations for thin-walled objects p. 399
Computer aided process planning in turning : ascendant design by features p. 407
Proposals for a product model p. 417
Towards declarative geometric modelling in mechanics p. 427
Modeling product information in concurrent engineering environments p. 437
Integration of design and manufacturing data models using step p. 445
Template architecture and services for integrating CAD-CAM and machining in small companies p. 455
Manufacturing capability modelling for concurrent product development p. 465
Performance improvement of a surface-surface intersection method p. 475
Integrated design of electromagnetic motors p. 487
Optimisation of a structure for biaxial mechanical tests p. 495
Hull design methodology for cross-country vehicles p. 505
A methodology for the design of servo-systems dedicated to machine-tools p. 515
Methodology for interactive design of a product and its assembly line p. 525
Modelling and analysis of the stamping and clamping of a cylinder head gasket p. 535
Author Index p. 545
