Preface
Numerical methods and applications
An approach to constructing generalized penalty functions
An exact method for solving the subproblem of the cutting angle method of global optimization
On modeling risk in Markov decision processes
Multiplicative programming and beyond via C-programming
Computing optimal control on matlab - the SCOM package and economic growth models

Stochastic optimal control of a solar car
On optimal algorithms in emergent computation
Optimal estimation of signal parameters using bilinear observations
On an extremal problem arising in queueing theory and telecommunications
Level functions of some optimal value functions
Regularized gap functions and D-gap functions for nonsmooth variational inequalities
Theory of optimization and related topics
Convex spectral functions of compact operators
Lower semicontinuity and rearrangement invariance
Some inequalities for Riemann-Stieltjes integral and applications
Prox-regularity and subjects
Concerning differentiability properties of locally Lipschitz functions
Laurent series for the inversion of perturbed linear operators on Hilbert space
The extremal principle and its applications to optimization and economics
Generic convergence of infinite products of nonexpansive mappings in Banach and hyperbolic spaces
Recession cones of star-shaped and co-star-shaped sets
Does continuity of convex-valued maps survive under intersection?
Existence and structure of solutions of optimal control problems
