Preface

Languages

Piccola - A Small Compositional Language
An Algebra of Actors
Developing Object-Based Distributed Systems
Semantics I. Reasoning About Histories in Object-Based Distributed Systems
Mobile Nets
Observation Equivalences for the Semantics of Inheritance
Java and Coordination

Tools for Integrating Formal Methods into the Java Software Development Process
Design and Implementation of Coordination Protocols for Distributed Cooperating Objects: A General Graph-Based Technique Applied to CORBA
Specifying Component-Based Java Applications
Object Composition and Reuse
Object Composition: A Case Study
Specifying Reusable Controllers for Software Components
Composition and Interaction for Behavioural Specifications

Telecommunications

Distributed Feature Composition: An Architecture for Telecommunication Services
Pattern Application vs. Inheritance in SDL
Engineering Telecommunication Services with SDL
SDL in Rigorous Object-Oriented Analysis

Formal Methods

A Junction Between State Based and Behavioural Specification
Protocol Assuring Universal Language

Specification of Dynamic Reconfiguration in the Context of Input/Output Relations

Assessing Service Properties with Regard to a Requested QoS: The Service Metric
Combining Design Methods for Service Development

Emerging Standards

LSCs: Breathing Life Into Message Sequence Charts
Modular Reasoning for Actor Specification Diagrams
Towards a Formal Operational Semantics of UML Statechart Diagrams

Semantics II. Foundations for Wide-Area Systems

Calculi for Concurrent Objects

Infinite Types for Distributed Object Interfaces
Static Safety Analysis for Non-Uniform Service Availability in Actors
A Logic for the Specification of Multi-Object Systems

Semantics III. Distributed and Concurrent Objects Based on Linear Logic
Composition in Multiparadigm Specification Techniques
Formal Development of Object-Based Systems in a Temporal Logic Setting

Table of Contents provided by Blackwell's Book Services and R.R. Bowker. Used with permission.
