Preface
Introduction
Analog IC filters  p. 1
Full CMOS analog filters  p. 2
Very Low-Distortion Operational Transconductance Amplifiers for High Frequency Applications
A very low-distortion high-frequency OTA  p. 18
Second-order effects and frequency response of the low-distortion OTA (LDOTA)  p. 28
Rejection to supply noise and noise level  p. 34
Design considerations for fully-differential OTAs  p. 45
Design Considerations for OTA-C Integrators and Full CMOS Resistors
Practical limitations of OTA based integrators  p. 68
Design of single-ended and fully-differential integrators  p. 77
The lossy integrator  p. 87
Full CMOS resistors for continuous-time signal processors  p. 97
The On-Chip Automatic Tuning of Continuous-Time Filters
The second-order filters  p. 123
Automatic tuning techniques based on phased locked loops  p. 131
Automatic frequency tuning technique based on charge comparison  p. 142
Automatic BW controller based on transient analysis  p. 155
High-Performance Realizations of Continuous-Time Filters
A high performance OTA-R-C lowpass filter  p. 178
A 1.8 MHz second-order bandpass filter with programmable Q over more than 1 decade  p. 190
A 10.7 MHz CMOS OTA-R-C bandpass filter with 68 dB dynamic range and on-chip automatic tuning  p. 199
General Conclusions  p. 221
Index  p. 225
