

Preface

Overview, Experiments, and Software

Background, Structure, and Preview of the Model Comparison

The AMBR Experiments: Methodology and Human Benchmark Results

The Simulation Environment for the AMBR Experiments

Models of Multitasking and Category Learning

Constrained Functionality: Application of the ACT-R Cognitive Architecture to the AMBR Modeling Comparison

A COGNET/iGEN Cognitive Model That Mimics Human Performance and Learning in a Simulated Work Environment

Distributed Cognition and Situated Behavior

Inheriting Constraint in Hybrid Cognitive Architectures: Applying the EASE Architecture to Performance and Learning in a Simplified Air Traffic Control Task

Conclusions, Lessons Learned, and Implications

Comparison, Convergence, and Divergence in Models of Multitasking and Category Learning, and in the Architectures Used to Create Them

In Vivo or In Vitro: Cognitive Architectures and Task-Specific Models

HBR Validation: Integrating Lessons Learned From Multiple Academic Disciplines

Applied Communities, and the AMBR Project

Accomplishments, Challenges, and Future Directions for Human Behavior Representation
