Message from the Workshop Co-Chairs
Program Chairs and Program Committee
A Node as a Real-Time Object p. 2
A Logic-Based Requirements Language for the Specification and Analysis of Real-Time Systems p. 8
Real Time Formal Specification Using VDM[superscript ++] p. 17
Schedulability and Safety Analysis in the Graphical Communicating Shared Resources p. 25
Paths: Programming with System Resources in Support of Real-Time Distributed Applications p. 36
A Client-Server Approach to DCE Inter-Operability p. 46
Implementation of a Transparent RPC for Distributed Object-Oriented Systems p. 54
The DREAM Library Support for PCD and RTO.k Programming in C++ p. 59
TaskPair-Scheduling with Optimistic Case Execution Times - An Example for an Adaptive Real-Time System p. 69
Adaptive Software Fault Tolerance Policies with Dynamic Real-Time Guarantees p. 78
Toward Dependable Safety-Critical Software p. 86
Ada95 Object-Oriented and Real-Time Support for Development of Software Fault Tolerance Reusable Components p. 93
Multiple Invariant System Design for Fault-Tolerant Real-Time Applications p. 101
Position Paper: Resource Management for Complex Distributed Systems p. 113
Commentary: Object-Oriented Programming of Complex Fault-Tolerant Real-Time Systems p. 120
Commentary: Failure Notifications: A Useful Extension to the Object Programming Model p. 125
Integration of Formal Verification with Real-Time Design p. 128
Specification and Analysis of Real-Time Systems in Statecharts p. 137
An Analytical Approach to Change for the Design of Reusable Real-Time Software p. 144
System Development Based on a Real-Time Object Model p. 152
Object-Oriented Software Development with Fault Tolerance for Distributed Real-Time Systems p. 160
Position Paper: Real-Time is a Critical Feature for CORBA, Just Like Everything Else p. 170
Position Paper: Real-Time Programming in the Concurrent Object-Oriented Language TAO p. 179
Position Paper: On Real-Time Extensions to Object Request Brokers p. 182
Position Paper: Using Object Frameworks to Enable Real-Time and Dependability in a Modular Operating System p. 186
An Object-Based Model for Dependable Real-Time Distributed Systems p. 192
Object-Oriented Implementation of an Infrastructure and Data Manager for Real-Time Command and Control Systems p. 201
Object-Oriented Method for Real-Time Systems Based on Timed Automaton p. 210
