Foreword
Preface
Program Overview
Committees
Reviewers
Keynote Address: Information Technology and GII Visions p. 2
A Software Process Management System Considering Workers' Workload p. 8
Software Cost Option Strategy Tool (S-COST) p. 15
Process Model Reuse to Promote Organizational Learning in Software Development p. 21
A Colored Petri Net-Based Formal Method for the Design of Control Systems p. 28
Constraint Petri Nets
Extracting Parallelism in Nested Loops p. 41
Coordination of Systems with Real-Time Properties in Manifold p. 50
SESAME: A Scalable and Extensible Architecture for Multimedia Entertainment p. 56
A Popularity-Based Data Allocation Scheme for a VOD Server p. 62
Mapping Petri Nets to Parallel Programs in CC++ p. 70
Integrating Parallel Functions into the Manipulation for Distributed Persistent Objects
A Semantics of the Separation of Interface and Implementation in C++ p. 83
Design-Level Cohesion Measures: Derivation, Comparison, and Applications p. 92
Data Models for Metrics-Based Project Management Systems p. 98
Heuristics for Computing Attribute Values of C++ Program Complexity Metrics p. 104
Object-Oriented Framework for Metrics Guided Risk Management p. 110
Applying Composable Security Properties to Assessment of Information Systems p. 118
Program Partitioning Optimizations in an HPF Prototype Compiler p. 124
A Task-Based Approach to Verifying Conceptual Models p. 132
Compilation of Disjunctive Logic Programs Using an Extended WAM p. 138
Multimedia on the Internet: Emerging Technology p. 146
Handling Multimedia Data for Mobile Computers p. 147
Multimedia Over the Internet p. 149
Multimedia on the Internet p. 150
Multimedia on the Internet: Emerging Technology p. 151
Is OO Working as It Promised? p. 154
OO is NOT the Silver Bullet p. 155
Software Industries in Asia p. 158
Software Industry in Taiwan p. 159
Business Rule Extraction from Legacy Code p. 162
Sharing the Design Information in a Distributed Concurrent Development of Large-Scale Software Systems p. 168
Real-Time Simulation Techniques Based on the RTO.k Object Modeling p. 176
Scheduling Algorithms for N-Version Programming Scheme p. 184
Decentralized Transaction Management in Multidatabase Systems
Classification of Weak Correctness Criteria for Real-Time Database Applications
Hierarchical Program Diagram Editor Based on Attributed Graph Grammar
On Integrating Existing Bibliographic Databases and Structured Databases
Would Internet Meet Global Acceptance?
Hypermedia Conference Proceedings
Would Internet Meet Global Expectation?
Internet Multimedia Application Technologies Current Practice and Future Directions
Keynote Address: Autonomous Decentralization of Society Structures and Information Systems
Algebraic Software Testing in Vector Spaces of Functions
Incremental Elicitation and Formalization of User Requirements through Rapid Prototyping via Software Transformations
Extending Statecharts with Duration
Extending Z with State Transition Constraints
Consistency Checking between Data and Process Diagrams based on Formal Methods
A Dynamic Indexing Structure for Searching Time-Series Patterns
A Fuzzy Association Algebra Based on a Fuzzy Object Oriented Data Model
A Presentation Scheduling Scheme for Multimedia Databases
VIRON: An Annotation-Based Video Information Retrieval System
Modeling Active Object-Oriented Database Applications using Multi-Level Diagrams
Static Slicing of Concurrent Object-Oriented Programs
A History-Based Approach for Early Faulty State Detection
Integration Issues in Information System Reengineering
Integrating Through User Interface: A Flexible Integration Framework for Third-Party Software
A Formal Method to Software Integration in Reuse
The Role of Architecture in the Development of Software Systems
Designing Software Architectures as Knowledge Specializations
SOPView: A Visual Query and Object Browsing Environment for SOP OODBMS
Extending OODB with Behavioral Temporal Management Capability
Consolidation of Query Results in a Multidatabase Environment: An Object-Oriented Approach
Which Network Will Win?
Marriage of Wired and Wireless Networks to Build Tomorrow's Internet
An Experience Report on Architecture Development
Slicing Functional Components from Data-Intensive Business Programs
A Component-Based Software Development Model
High Assurance Systems Engineering
High Assurance Systems Engineering - Position Paper
Dynamic Network Management for Firmware Controlled Network Topology
