Reviewers
Specifying, Building, and Operating Reliable Systems
Reliability Perspective: Past, Present, and Future
Automatic Failure Detection with Conditional-Belief Supervisors p. 4
Analyze-NOW - An Environment for Collection and Analysis of Failures in a Network of Workstations p. 14
Towards Automation of Checklist-Based Code-Reviews p. 24
Sensitivity of Reliability Growth Models to Operational Profile Errors p. 35
On Reducing the Sensitivity of Software Reliability to Variations in the Operational Profile p. 45
Avionics Software Problem Occurrence Rates p. 55
Automated Test Generation for Predicates p. 66
Experience with the Combinatorial Design Approach to Automatic Test Generation p. 76
Object State Testing and Fault Analysis for Reliable Software Systems p. 112
Residual Fault Density Prediction using Regression Methods p. 87
Integrating Metrics and Models for Software Risk Assessment p. 93
Design of Reliable Software via General Combination of N-Version Programming and Acceptance Testing p. 104
Integration Testing Using Interface Mutations p. 112
An Approach to Testing Rule-Based Systems p. 122
Task Decomposition Testing and Metrics for Concurrent Programs p. 132
Software Reliability Models: An Approach to Early Reliability Prediction p. 142
Designing Reliable Systems from Reliable Components using the Context-Dependent Constraint Concept p. 152
Using the Genetic Algorithm to Build Optimal Neural Networks for Fault-Prone Module Detection p. 152
Reengineering IBM Software Development p. 166
Beyond Fault Tolerance: Challenges to Delivering 7x24 Computing p. 175
Using Fault Injection to Increase Software Test Coverage p. 185
Error Injection Aimed at Fault Removal in Fault Tolerance Mechanisms - Criteria for Error Selection using Field Data on Software Faults p. 196
Comparing Disk and Memory’s Resistance to Operating System Crashes p. 207
Validating Software Architectures for High Reliability p. 213
Reliability of a Commercial Telecommunications System p. 219
Reliability and Availability of a Wide-Area Network-Based Education System p. 226
DQS’s Experience with SRE p. 236
Software Reliability Engineering for Client-Server Systems p. 236
Policy-Driven Fault Management in Distributed Systems
A Practical Strategy for Testing Pair-wise Coverage of Network Interfaces  
Method for Designing and Placing Check Sets Based on Control Flow Analysis of Programs  
A Replication Technique Based on a Functional and Attribute Grammar Computation Model  
An On-Line Algorithm for Checkpoint Placement  
Efficient Allocation of Testing Resources for Software Module Testing Based on the Hyper-Geometric Distribution Software Reliability Growth Model  
Unification of Finite Failure Non-Homogeneous Poisson Process Models through Test Coverage  
A Conservative Theory for Long-Term Reliability Growth Prediction  
Primary-Shadow Consistency Issues in the DRB Scheme and the Recovery Time Bound  
An Empirical Evaluation of Maximum Likelihood Voting in Failure Correlation Conditions  
Supervision of Real-Time Software Systems using Optimistic Path Prediction and Rollbacks  
Data Partition Based Reliability Modeling  
Detection of Software Modules with High Debug Code Churn in a Very Large Legacy System  
Fault Exposure Ratio: Estimation and Applications
