Conference Committee

Introduction

Vision-based defect detection method for fine-pitch surface-mounted devices p. 2
Pipelined implementation of binary skeletonization using finite-state machines p. 14
Visual detection of defects in solder joints p. 22
Solder inspection using an object-oriented approach to machine vision p. 34
Algorithm design for use in cross-sectional x-ray image analysis of solder joints p. 46

Real-time landmarks detection for the mobile robot PARIDE p. 60
Optoelectronic implementation of BPEJTC tracking system p. 72
Method for the contactless measurement of process parameters in a continuous rolling process p. 84
Underwater cable automatic recognition using Hough transformation p. 94
Automatic classification of bottles in crates p. 108
Surface sampling techniques for 3D object inspection p. 118
Three-dimensional object surface identification p. 136
Automatic inspection system for stain and dent default in switch manufacturing p. 148
CAD-based intelligent robot vision system p. 156
Two novel methods for range imaging using the MAPP2200 smart sensor p. 170
Three-dimensional range information from single-frame incoherently illuminated images p. 182
High-speed TDI imaging for peripheral inspection p. 189
Automated detection and classification of dice p. 196
Development of color-vision-based solutions for lumber grading p. 203
On-line visual inspection techniques for quality control during the deinking of secondary fiber paper p. 215
Image screening using spatial filters based on linear transformation for image recognition p. 225
Neural network for defect classification in industrial inspection p. 236
Automatic grading of textured ceramic tiles p. 248
Binary texture estimation using linear samples p. 257
Model-based inspection of texture web materials p. 267
Automated inspection system for detecting metal surface cracks from fluorescent penetrant images p. 278
Automatic casting surface defect recognition and classification p. 292
Removal of defects on flash radiographic images by fuzzy combination p. 301
Machine vision inspection of lace using a neural network p. 314
Fuzzy reasoning rule-based system for handling lace pattern distortion p. 323
Delineation of defects in noisy ternary images using a piecewise dynamic approach p. 334

Validation of personalized information in production-line mailing p. 344
Machine vision for automatic calibration of analog display instruments p. 356
Machine vision inspection system for automobile gauge panel p. 367
Addendum p. 377
