Simple improvement of the gradient operator p. 2
Image smoothing with minimal distortion p. 14
Incomplete system models can cause image restoration failures p. 22
Warping time-frequency and time-scale representations to match signals p. 34
Multivariate morphological granulometric texture classification using Walsh and wavelet features p. 46
Novel approach to direct surface parameter estimation using structured light p. 57
Filtering clutter by optimal granulometric bandpass filters p. 70
Image processing and computer vision algorithm selection and refinement using an operator-assisted meta-algorithm p. 77
Separation of close binary stellar systems via the method of moments p. 88
Block median filters p. 100
Parallel wavelet transform algorithm for image compression p. 112
Information theoretical assessment of visual communication with wavelet coding p. 123
Image block coding using exact solutions of fractal equations p. 135
Spatial correlation-based approach to motion vector estimation in video coding p. 150
Adaptive cosine transform coding using marginal analysis p. 162
Integrated image information management: research issues p. 168
Content-based retrieval of remote-sensed images using vector quantization p. 178
Model-based VQ for image data archival, retrieval, and distribution p. 190
Universal interactive image data acquisition and compression technology (UNIDAC) and its dual-use applications p. 199
Parallel cooperative segmentation method for multispectral images p. 207
Fast algorithm for constructing image identification p. 218
Relational graph representation of color images for model-based matching using relational distance measurement p. 229
Multispectral segmentation and textural feature extraction p. 241
Vision-based vehicle tracking via a noise-tolerant optical flow method p. 254
Fast algorithms for object orientation determination p. 263
Camera self orientation and docking maneuver using normal flow p. 274
Space-variant vision for an active camera mount p. 284
Real-time visual target tracking: two implementations of velocity-based smooth pursuit p. 297
Binocular stereo via log-polar retinas p. 309
Motion-based visual behaviors for mobile robots p. 321
Model of spatial frequency column in primary vision system p. 333
Rectangular pixel-based fractal diffraction patterns p. 344
Unification of two fractal families p. 350
Nonlinear dynamics in a neural network (parallel) processor p. 363
Lie group approach to neural computation of image affine flow and binocular affine disparity p. 373
Active image registration and recognition  p. 385
Topographical analysis with time-modulated structured light  p. 396
Optically addressed SLM-based holographic display  p. 408
Testing of remapping for reading enhancement for patients with central visual field losses  p. 417
Distance-morphological transformations of digital images  p. 425
Neighborhood operation binary image algebra and its optical implementation  p. 435
Texture classifiers using the surface area distribution of images  p. 446
General neural computer architecture and its ANN-based task assignment method for parallel-distributed processing  p. 457
Three-dimensional object surface matching  p. 465
Geometric transform invariant texture analysis  p. 475
Alternative representations of an image via the 2D wavelet transform: application to character recognition  p. 486
Massively parallel image processing with a new integral multifunctional videosensor  p. 498
System of optical control of complicated shape surface geometry  p. 509
Algorithm of sewing together the cell's image  p. 514
Addendum  p. 519
Author Index  p. 519
