<tr>
<td>Introduction</td>
</tr>
<tr>
<td>Spatial light modulator and optical analog computing</td>
</tr>
<tr>
<td>Principle and optical architecture of a high-performance optoelectronic switching network</td>
</tr>
<tr>
<td>Optimization steps in a cuneiform inscription characterization process</td>
</tr>
<tr>
<td>Fibers supporting super-Gaussian beams: cladding effects</td>
</tr>
<tr>
<td>Dependence of diffraction efficiency on storage density in digital holographic memory using bacteriorhodopsin</td>
</tr>
<tr>
<td>Advanced optical network architecture for integrated digital avionics</td>
</tr>
<tr>
<td>Hybrid hierarchical neural optoelectronic processor based on the vector-matrix multiplier and the preprocessing unit</td>
</tr>
<tr>
<td>Propagation characteristics of anisotropic chirowaveguides</td>
</tr>
<tr>
<td>Optoelectronic advancements in analog avionics networking systems</td>
</tr>
<tr>
<td>Optical processing and computing based on the four-wave mixing with time delay</td>
</tr>
<tr>
<td>Novel polarization-sensitive optoelectronic switching device for optical information processing</td>
</tr>
<tr>
<td>Application of optoelectronic neural networks to the selection of contour figure features</td>
</tr>
<tr>
<td>Two-cascade acousto-optic matrix processor for SAR systems</td>
</tr>
<tr>
<td>High-efficiency vector-matrix multiplier for large-scale optoelectronic neuro-coprocessor</td>
</tr>
<tr>
<td>Single-channel optoelectronic neuro-coprocessor based on a vector-matrix multiplier with an adjustable threshold</td>
</tr>
<tr>
<td>Three-dimensional integrated circuits with optical interconnections</td>
</tr>
<tr>
<td>Optical neuron network based on a X superscript (2) hologram recording</td>
</tr>
<tr>
<td>Optoelectronic mass-parallel OPTOCOM supercomputer</td>
</tr>
<tr>
<td>Optoelectronic technology and base set of the OPTOCOM optoelectronic CMOS VLS</td>
</tr>
<tr>
<td>Digital fiber optic communication system with 486-mb/s digit rate</td>
</tr>
<tr>
<td>Hologram overlapping and collinear heterodyning as a perspective approach to high-capacity optical memory</td>
</tr>
<tr>
<td>Controlled optical fiber processor for matrix/vector multiplication</td>
</tr>
<tr>
<td>Method of acceleration of parallel information processing in optoelectronic systems</td>
</tr>
<tr>
<td>Neural network for invariant recognition</td>
</tr>
<tr>
<td>Limits of the use of polymer thin films for spatial light modulation</td>
</tr>
<tr>
<td>Acoustic and optical beams with a long interaction length in an anisotropic medium</td>
</tr>
<tr>
<td>Dynamic theory of hologram optical amplification in photopolymer materials</td>
</tr>
<tr>
<td>Spatial self-action of light beams in photorefractive optical waveguides</td>
</tr>
<tr>
<td>Storage capacity of pixelated paraxial diffractive elements</td>
</tr>
<tr>
<td>Modulation characteristics of the Sanyo liquid crystal television</td>
</tr>
<tr>
<td>Design of smart photodetector arrays for page-oriented optical memories</td>
</tr>
<tr>
<td>Application of the integral equation method to the problem of four-wave interaction in nonlinear media</td>
</tr>

</table>
Laser beam self-channeling in photorefractive waveguides  
Collinear and noncollinear multifrequency acousto-optic interaction in guided-weave Bragg cells  
Two-beam coupling in sillenite crystals  
Noise degradation and fault tolerance in annealed binary-phase hologram interconnections  
Acousto-optical interaction bandwidth of more than 2 GHz  
High-photosensitive optical information carriers based on the avalanche phenomena of charge carrier in amorphous semiconductor  
Multilayer three-dimensional optical recording  
Coupled injection microlasers with saturable absorber as optical model of a neuron  
Influence of thermal parameters and exposure duration on the possible resolving power of SLMs with phase transition  
Electromechanical coupling coefficients of Ba$_{2}$Na$_{5}$Nb$_{5}$O$_{15}$ crystals  
Laser direct writing system for fabrication of smooth-relief micro-optical elements  
Effect of proton exchange on electro-optic intensity modulation in LiNbO$_{3}$ waveguides with leaky modes  
Optical suppression of a double-phase conjugation in a photorefractive Bi$_{12}$TiO$_{20}$ waveguide  
Cs:KTiOAsO$_{4}$ optical ion-exchanged waveguides  
Hybrid optical bistability by two-wave-mixing photorefractive crystal with alternating electric field  
Optical memory device based on vanadium dioxide film and a fast thermocooler  
Self-developed dichromated gelatin films for holography  
Influence of photoconductor parameters on characteristics of spatial-light modulators based on photoconductor-liquid-crystal structures  
Investigation of the light filtering and control of acousto-optical device information-dynamic and power characteristics  
Gray-scale FLC for SLM and displays  
Plural partial associations  
Pulsing record of the images and holograms on an optically addressed spatial-light modulator with highly sensitive layer of amorphous hydrogenated silicon  
Peculiarities of application of multimode semiconductor lasers for recording deep holograms  
Multichannel light-modulating structures based on electro-optical crystals  
Investigation of recording density increase using a multilayered holographic carrier  
Investigation of wideband acouto-optical modulators based on a tellurium dioxide single crystal  
Multichannel small-size Bragg cell based on a tellurium dioxide single crystal  
Possibility of a 34-channel avalanche photodiode array based on metal-resist-semiconductor use for processing of signals read from a holographic disc  
Dynamics of fast switching of STLM valves operating on the basis of twist effect in liquid crystals
Coaxial liquid crystal modulator for fiber commutation channels in optical memory systems

X-ray images input into a coherent optical processing system using a liquid crystal spatial-light modulator

Dynamics of hologram recording in photopolymer materials

New photothermoplastic information carriers having intrinsic raster for low-contrast grey-level image recording

High-sensitivity detector based on CCPD for spectroscopy

High-accuracy optical computing using motorized optical fractal synthesizer

Quantized amplitude-compensated matched filter

Detection, estimation, and prediction of an unknown signal in unknown noise: the correlation filter

Verifying measuring accuracy of fractional part of interference fringe order by interferometric signal autoconvolution method

Noise as a way of representing clutter: experimental and simulation results

Garden of joint transform correlators: an account of recent advances

Influence of preprocessing on correlation filter design: simulated and experimental considerations

Nonlinear effects in multifrequency acousto-optic diffraction

Adaptive acousto-optical processor for chirps

Wideband UHF acousto-optic processor

Optical architecture of a joint transform local correlator

Wideband multichannel acousto-optic spectrometer for millimeter and submillimeter wavelength radio astronomy

Block scheme of CTDMA radio interface for verification and testing (CTDMA-RISVAT)

Multichannel acousto-optic correlator using coherence modulation of light

Acousto-optic interaction as a basis for unified description of spectral measurements

Optoelectronic generator with multistability of amplitude

Noncoherent correlator with reflective volume holographic filter

Quadrature space-integrating acousto-optic correlator for phase-shift keyed signal processing

Interference space-time-integrating acousto-optic spectrum analyzer

Optical signals with the minimum dispersion broadening in fibers

Acousto-optical radio signal classifier

Signal transmission by optical solitons with a short light-field oscillation duration

Temporal complexity and efficiency of hybrid acousto-optic systems for signal detection

Acousto-optical semiconductor laser power spectrum analyzer of RF signals with expanded dynamic range

One possible approach to the hybrid systems design expert system project

Fast processing algorithm of hybrid acousto-optic systems for signal band detection
Rough estimation of stochastic effects influencing the parameters of acousto-optic power spectrum analyzers with semiconductor lasers p. 493
Acousto-optic spectrum analyzers for RATAN-600 radiotelescope p. 497
Experimental waveguide acousto-optical correlator p. 502
Experimental and computer simulation investigation of the time-integrating planar acousto-optical correlator in regime of delay time increase p. 507
Acoustic-optical scanning by radiation: probabilistic analysis p. 511
Information structure of optical radiation p. 515
Signal processing with acousto-optical separation of channels: possibilities and potential restrictions p. 520
Acousto-optical radiometer-spectrum analyzer of radio signals using fiber optic delay line p. 525
Combined signal processing foundation of spectrum estimation p. 528
Acousto-optic processors of combined signal processing p. 533
High-frequency resolution acousto-optical spectrum analyzer with semiconductor laser for radioastronomy p. 538
Physical and constructive optimization of a wideband acousto-optical deflector for radio signal processing based on planar multi-element traveling wave transducers p. 542
Acousto-optic spectrometer for a weak optical signal processor p. 547
Spatial dispersion effects in acousto-optic interaction in paratellurite single crystals p. 552
Optical and acoustical study of quartz twinning under uniaxial stress p. 555
Recent progress in invariant pattern recognition p. 562
Two-beam wavefront reconstruction application for phase object recognition p. 568
Free programmable smart pixel processor element arrays for standard functions p. 574
Use of the Fresnel transform for optical pattern recognition p. 579
Photorefractive fiber holograms p. 586
Characterization of coding domains by optimally implementing optical trade-off (OT) filters in the joint transform correlator p. 592
Application of parallel-aligned nematic liquid crystal spatial-light modulator (PAL-SLM) to optical joint transform correlator p. 598
Why is it sensible to use wavelets in matched filtering? p. 604
Input image spectral density estimation for real-time adaption of correlation filters for optical pattern recognition p. 610
Local anisotropic features method and its application p. 618
Parallel-consecutive pattern recognition method based on a combination of optical correlation and digital structural analysis p. 626
Experimental verification of phase contrast image synthesis system p. 630
Incoherent holographic bipolar correlator for recognition of non-edge-enhanced images p. 635
Image formation in an optical-electronic system with spatial coherent transformation of light field p. 639
Application of coherent optical methods for papillary design analysis p. 643
Blood cell properties determination by coherent optical methods p. 648
Laser infrared introscopy of biological tissues p. 652
Color photometry by optical image processing
Adaptive correlation image processing by collinear optical heterodyning
Optical-structural machine analysis of materials microstructure for forming strength reliability of articles
Beta distribution and image correlation
Mathematical model of retina
State changing of neural networks based on image correlation
Automation of research optical monitoring systems with resonant jump
Analytical calculation methods for eigenfunctions and eigenvalues of Karhunen-Loève transformations
Optoelectronic methods of image processing based on local anisotropy features analysis
Optics of very near fields: theory and applications
Infrared criminalistic devices
Shaping of optical pulses with acousto-optically controlled velocity of propagation
Storage of picosecond soliton digital trains using additive active mode-locking in semiconductor laser
Acoustic field generated by a small aperture SAW transducer
Acousto-optic ambiguity function processor
