Conference Committee
Quadratic filters for object classification and detection p. 2
Design of synthetic discriminant functions for use in hybrid digital-optical correlator p. 14
Correlation filters for object tracking, target reacquisition, and smart aim-point selection p. 25
Maximum-likelihood approach to target tracking on image sequences p. 33
Strategy for autonomous control of correlation-based trackers p. 45
Eigen detection filters that reject unseen clutter p. 56
New approach for intensity distortion-invariant OPR p. 62
Pattern recognition based on morphological transforms and genetic algorithms p. 69
Phase-only projection-slice filters for invariant optical pattern recognition p. 76
Target recognition under projective transformation p. 87
Automated segmentation and feature extraction of product inspection items p. 96
Detection method of an automobile number plate using optical rank order HMT p. 108
Optimized optical morphological object classification p. 119
Second-generation miniature ruggedized optical correlator (MROC) module p. 128
Optical processing at Lockhead Martin p. 138
Correlation at sea p. 156
Complex phase/amplitude spatial light modulator advances and use in a multispectral optical correlator p. 170
ImSyn: optoelectronic product for image synthesis and correlation p. 178
Compact portable optical correlator with binary ferroelectric SLMs and optimum filters for disjoint noise applied to varying illumination conditions p. 185
High-speed camera-sized optical wavelet processor p. 194
Recognition system rapid application prototyping tool p. 202
Experimental measurements of dynamic range requirements for cross-correlation with synthetic discriminant functions p. 214
System noise limitations on the utility of an LC-SLM p. 225
How do we make a good input image? p. 232
Detection of magnification, rotation, and parallel translation using Hough and Fourier-Mellin transforms p. 244
Rotation, scale, and translation invariant pattern recognition using feature extraction p. 255
Shift- and deformation-robust optical character recognition based on parallel extraction of simple features p. 265
Hybrid shape recognition system with microlens array processor and direct optical input p. 277
Scale-invariant fringe-adjusted joint transform correlation p. 288
Automatic target recognition processor using an optical wavelet preprocessor and an electronic neural classifier p. 299
Optical processor for real-time detection of defects in textile webs p. 307
Anthropomorphic pattern recognition systems p. 312
Multispectral image feature extraction by the joint wavelet-transform correlator p. 322
Optical-electronic pattern recognition system based on the image’s logarithmic and transformation method p. 332

Edge detection using joint transform correlation p. 343

RI-MINACE filters to augment segmentation of touching objects p. 354

Fingerprint recognition using binary joint transform correlators with constant false alarm rate p. 366

Combined optical and neural network fingerprint matching p. 373

Security system based on optical image encryption p. 383

Optical implementation of image encryption using random phase mask and speckle-free phase Fresnel hologram p. 389

Combining multiple correlators using neural networks p. 398

Turbulence simulation of optical processing through turbulent media p. 404

Submicron position resolution using the chirp-modulated single-lens joint transform correlator p. 416

Diffractive optical devices for spatial image separation p. 421

Phase-based processing for synthetic aperture applications p. 430

Adaptive nonlinear approach for noise removal of impulsive and nonimpulsive noise in images p. 435

Calculation of reflectivity and transmissivity of a multilayer refractive system using signal graph flow approach p. 441

Joint transform correlators with spatially incoherent illumination p. 453

Fuzzy recognition of noncompact musical objects p. 458

Coherent Fourier imaging optical system for liquid bridge experiments p. 469

Single-step joint Fourier transform correlator p. 478

Optical correlator architecture for the identification of many patterns with a multiplexed matched filter p. 488

Author Index p. 493
