Conference Committee

Hot Topic Lecture: Noninvasive optical study of the human brain

Near-infrared spectroscopy of the human brain during electroconvulsive therapy p. 1
Validation of the use of homogeneous reference phantoms for optical tomography of the neonatal brain p. 6
Optical tomographic brain imaging with diffusion and transport-theory-based algorithms p. 12
In vivo simultaneous cortical and intracortical monitoring of cerebral blood flow and mitochondrial redox state in experimental animals p. 22
Signal source separation and localization in the analysis of dynamic near-infrared optical tomographic time series p. 31
Three-dimensional simultaneous absorption and scattering coefficient reconstruction for reflection geometry p. 52
Benefits of vectorization in optical tomography p. 59
Breast lesion diagnosis using combined near-infrared diffusive light and ultrasound: initial clinical results p. 70
Time-frequency analysis of functional optical mammographic images p. 84
Functional imaging of the brain using a portable NIR instrument p. 96
Feasibility of NIRS tomographic reconstruction with multispectral continuous wave data by mapping into frequency domain data p. 103
Three-dimensional optical tomographic brain imaging during hypercapnia in rodents p. 115

Near-infrared measurements of hemodynamic and oxygenation changes on the frontal cortex during breath holding, hyperventilation, and natural sleep p. 124
Optical topographic studies of adults and neonates p. 134
Animal imaging using immersion p. 145
Comparison of two time-resolved detectors for diffuse optical tomography: photomultiplier tube-time-correlated single photon counting and multichannel streak camera p. 154

Hemodynamic measurements in rat brain and human muscle using diffuse near-infrared absorption and correlation spectroscopies p. 164
Portable multichannel multiwavelength near-infrared diffusive light imager p. 175
Optical mammography with single-wavelength contrast enhancement and multiwavelength oxygenation assessment p. 183
Optical images from pathophysiological signals within breast tissue using three-dimensional near-infrared light p. 191
Cancerous and normal human tissues investigated by near-infrared time-resolved spectroscopic imaging techniques p. 199
Four-wavelength time-resolved optical mammograph p. 203
Advances in 3D frequency domain fluorescence tomography p. 211
Optical fluorescence tomography with the equation of radiative transfer for molecular imaging p. 219
Optical properties by time-resolved fluorescence Monte Carlo simulation p. 226
A fast reconstruction algorithm for implementation of time-series DC optical tomography p. 236
Hybrid DOT and MRI system p. 246
Reflectance-type image reconstruction algorithm for time-resolved optical tomography of cerebral hemodynamics  p. 253

Use of MRI information to initialize the first stage of the image reconstruction algorithm in diffuse optical tomography  p. 264

Fast three-dimensional hybrid-dual-Fourier tomography using a radiative transfer forward model  p. 273

Optimizing image reconstruction of tissue blood flow by diffuse correlation tomography  p. 287

Internal refractive index changes affect light transport in tissue  p. 296

Simulation of spectral reflectance of multiple scattering medium using the Mie theory combined with the Monte Carlo method  p. 305

Exogenous specific fluorescence marker location reconstruction using surface fluorescence imaging  p. 314

Determination of subsurface tumor localization in animal models with near-infrared (NIR) fluorescence imaging  p. 322

Estimation of optical fluorescent impulse response kernel in combined time and wavelength spaces  p. 330

Assessment of the menstrual cycle upon total hemoglobin, water concentration, and oxygen saturation in the female breast  p. 342

Three-dimensional ultrasound imaging system in a combined ultrasound and near-infrared imager  p. 349

Quantitative clinical nonpulsatile and localized visible light oximeter: design of the T-Stat tissue oximeter  p. 355

Validation of NIRS in measuring tissue hemoglobin concentration and oxygen saturation on ex vivo and isolated limb models  p. 369

Noninvasive cerebral hemoglobin oxygenation quantification of fetal sheep under hypoxic stress in utero using frequency-domain diffuse optical two-layer model  p. 379

Nonuniform tumor vascular oxygen dynamics monitored by three-channel near-infrared spectroscopy  p. 388

Study of the pressure effect in near-infrared spectroscopy  p. 397

Validation of hemoglobin and water molar absorption spectra in near-infrared diffuse optical tomography  p. 407

Breast tumor oxygenation in response to carbogen intervention assessed simultaneously by three oxygen-sensitive parameters  p. 416

Eight-channel time-resolved tissue oximeter for functional muscle studies  p. 424

Clinical evaluation of a near-infrared tissue spectrometer in peripheral vascular disease  p. 431

NIR time domain diffuse optical tomography experiments on human forearm  p. 437

Quantification of muscle oxygenation and flow of healthy volunteers during cuff occlusion of arm and leg flexor muscles and plantar flexion exercise  p. 447

RSI: oxygen consumption, blood flow, and reoxygenation in patients suffering RSI measured by noninvasive optical spectroscopy  p. 454

Angular domain optical imaging of structures within highly scattering material using silicon micromachined collimating arrays  p. 462

Spread spectrum time-resolved photon migration imaging system: the principle and simulation results  p. 474

Analysis of ICCD time-gated images through turbid media using a perturbative model  p. 480
Optical fiber arrangement of optical topography for spatial resolution improvement p. 487
Detection and imaging of the reconstituted pyropheophorbide-cholesterol oleate labeled low-density lipoprotein in the HepG2 tumor p. 497
NIR imaging the delivery of cathepsin B probe to breast tumors p. 505
Imaging small inhomogeneities by time-resolved laser transmittance measurements using different reconstruction procedures p. 513
Spatiotemporal characteristics of cerebral blood volume changes in different microvascular compartments evoked by sciatic nerve stimulation in rat somatosensory cortex p. 521
Retrieval of the optical properties of a layered medium based on an exact analytical solution of the time-dependent diffusion equation p. 530
Random walk analysis of time-resolved transmittance measurements p. 536
Biochemical changes between normal and BCC tissue: a FT-Raman study p. 546
The way to universal and correct medical presentation of diagnostic information for complex spectrophotometry noninvasive medical diagnostic systems p. 554
Detection of time window of cerebral blood flow response induced by sciatic nerve stimulation using temporal clustering analysis p. 559
Quantitative estimate of spatial/temporal variations in the optical properties of tissue-like media from diffuse reflectance data p. 567
Application of I&Q; detection system in scouting the curative effect of neck squamous cell carcinoma p. 575
Spatial sensitivity profiles by time-resolved fluorescence Monte Carlo simulation p. 581
Hybrid approach to Bayesian image reconstruction p. 591
Effects of tissue optical properties on time-resolved fluorescence measurements from brain tumors: an experimental and computational study p. 600
Method to measure the optical properties of small volumes of biological tissues p. 609
Finger joint imaging by laser transillumination computed tomography based on coherent detection imaging method p. 615
Modeling photon propagation in anisotropically scattering media with the equation of radiative transfer p. 624
Diffuse optical tomography with a priori anatomical information p. 634
Three-dimensional imaging of the metabolic state of c-MYC-induced mammary tumor with the cryo-imager p. 647
Handheld low-frequency phased array near-infrared (NIR) breast cancer localizer p. 656
Addendum p. 665
Author Index p. 668
