Conference Committee

Electrical and mechanical field interactions of piezoelectric systems: foundation of smart-structure-based piezoelectric sensors and actuators, piezotransformers, and free-fall sensors

Electrical and electrochemical characterization of electroconductive PPy-p (HEMA) composite hydrogels p. 1

Electromechanical modeling of charge sensing in ionic polymers p. 13

Conformational mechanics of stimulus-responsive polypeptides p. 31

Ferroelectric fluoro-terpolymers with high dielectric constant and large electromechanical response at ambient temperature p. 41

Thin films of light-responsive polymers for sensing and surface patterning p. 51

Overview of multifunctional materials p. 61

Effective properties of three-phase electro-magneto-elastic multifunctional composite materials p. 70

Initial Investigation in actuator design using high-temperature shape memory alloy p. 81

A bio-inspired high-authority actuator for shape morphing structures p. 92

Bistable shape memory thin film actuators p. 101

SMA-thin film composites providing traveling waves p. 110

3D finite-element simulation of a shape memory microgripper p. 119

Characteristics of magnetic force control device with magnetostrictive and piezoelectric laminate composite p. 130

Carbon nanotubes as actuators in smart structures p. 138

Effect of composition on the magnetic and elastic properties of shape-memory Ni-Mn-Ga p. 147

Martensitic transformation behaviour under magnetic field in Co-Ni-Al ferromagnetic shape memory alloys p. 159

Experimental characterization of NiMnGa magnetic shape memory alloy rods under dynamic magnetic fields p. 169

Effects of growth rate and composition on the microstructure of directionally solidified NiMnGa alloys p. 181

Shape memory effect and magnetostriction of sputtered NiMnGa thin films p. 191

Magnetic-field-induced strain in single-crystal Ni-Mn-Ga p. 200

Frequency response of single-crystal Ni-Mn-Ga FSMAs p. 207

Grown crystalline Ni-Ti shape memory alloy thin films p. 212

Thermomechanical properties of Ni[subscript 60%weight]Ti[subscript 40%weight] p. 219

Composition and annealing effects on the mechanical properties of superelastic thin film nickel titanium p. 230

Shape memory alloys characterization by different methods p. 239

Low-cost high-quality Fe-based shape memory alloys suitable for pipe joints p. 250

Dynamic response of a frame with SMA bracing p. 262

Micromechanical approach of stress-induced phase transformation p. 271

Sharp phase front model of phase transformation and micro-macro transitions in shape memory alloys p. 282
Numerical studies of wave propagation in polycrystalline shape memory alloy rods
Modeling the hysteresis of a simple SMA wire actuator with a load-dependent Preisach-type operator
Calculation of the onset and progress of the martensitic transformation using tensorial measures for transformation kinetics
The effective electromechanical moduli of ferroelectric crystals with engineered domain configurations
Micro-electromechanically informed phenomenological constitutive models for ferroelectrics
Crystal-variant-based modeling of relaxor single crystals
A micro-electromechanical model of ferroelectric materials with thermal and rate effects
Modeling large strain electrostriction of ferroelectrics under combined electromechanical loads
New approach to solving crack tip stress fields for piezoelectric materials
Polarization switching of ferroelectric polycrystals: finite element modeling and simulations
Influence of the fracture process zone in ferroelectrics on the effective fracture toughness
Fully three-dimensional incremental model of magneto-elastic hysteresis in Terfenol-D
A general FEM technique to model wave propagation in cellular periodic structures
Prestressed curved actuators: characterization and modeling of their piezoelectric behavior
Large-stroke low-profile single-crystal piezoelectric actuators
High-performance tonpilz transducers utilizing d[subscript 32]-cut piezoelectric single crystals
Characterization of loaded prestressed piezoelectric actuators
Nonlinear behavior of piezoelectric lead zinc niobate-lead titanate single crystals under AC electric fields
Adhesive characterization in prestressed piezoelectric laminates
Fabrication of piezoelectric fibers with metal core
Extended-temperature-range piezoactuator system with very large movement
Microdomains and averaged symmetry in poled Pb(Mg[subscript 1/3]Nb[subscript 2/3])O[subscript 3]-PbTiO[subscript 3] crystals
Dependency of electric field and mechanical stress on piezoelectric strain of PZT 3203HD
Measurement of all the elastic, piezoelectric, and dielectric properties of PMN-PT single crystals
Analysis of the influence of tiny mirrors and mechanical holder in the interferometric measurements of piezoceramic displacements operating in a kHz range
Computation of fracture toughness of giant magnetostrictive material
Mechanical properties of magnetostrictive iron-gallium alloys
High-field behavior of piezoelectric fiber composites
Modeling and measurement of piezoelectric fibers and interdigitated electrodes for the optimization of piezofiber composites
