Study of fission-fragment excited xenon laser in He-Xe, Ar-Xe, and He-Ar-Xe mixtures p. 1

Kinetics of CO first negative system excitation by ionized radiation p. 14

Efficient long-pulsed XeCl lasers p. 24

Pulsed repetitive CO\textsuperscript{2} laser pumped by longitudinal discharge p. 29

Efficient non-chain discharge HF and DF lasers p. 35

Investigation on parallel spark array pre-ionization TEA CO\textsuperscript{2} laser p. 43

Discharge-pumped XeCl laser triggered by e-beam p. 51

Wide-aperture electric-discharge XeCl lasers p. 55

Peculiarities of short pulse electrical discharge XeCl laser p. 60

Waveguide pulsed gas lasers p. 67

Mechanisms of pulsed inversion in a process of ion-ion recombination p. 75

Mathematical modeling of ion recombination strontium vapor laser p. 83

Kinetics of active media of He-Zn\textsuperscript{+}, He-Cd\textsuperscript{+}, He-Ti\textsuperscript{+} and Ne-In\textsuperscript{+} hollow cathode lasers and new laser lines p. 104

On the possibility of lasing an new transitions of Sr II under conditions of strongly nonstationary recombination kinetics p. 120

The influence of HBr additives on breakdown characteristics of Ne-H\textsuperscript{2}-Cu laser mixture p. 125

Effect of an external magnetic field on the output power of a copper bromide laser p. 134

Efficiency of charging circuit for metal vapor lasers p. 141

Dichromatic laser photolysis of eosin in solid gelatinous matrix p. 147

Study of cresol phototransformations in neutral and acidic medium p. 152

Electron impact excitation of carbazole vapor p. 157

On the mechanism of the runaway of electrons in a gas : the universal escape curves for He, Xe, N\textsuperscript{2} p. 161

Electron beams formations in helium-filled diode under atmospheric pressure p. 174

Formation of high-current electron beams in dense gases p. 181

Subnanosecond electron beam in air under atmospheric pressure p. 188

Properties of plasma of volume nanosecond high-pressure discharge formed in non-uniform electric field p. 197

The calculation of charged particles densities in gas flow discharge chambers p. 208

Numerical simulation of the processes in fast flow gas discharge CO\textsuperscript{2} lasers p. 214

Effective electron impact excitation cross-sections of SrI singlet levels p. 224

Photoconductive response of type IIa diamond in the 222-353-nm range p. 230

Modification of thin metal and ceramic films by UV and IR laser radiation p. 238

Effect of plasma needle on cultured cells p. 247

A sealed-off strontium vapor laser p. 252

A comparative evaluation of efficiency of different methods of treating pretumoral changes of bronchial epithelium by clinical-immunological data p. 262

Influence of nitric oxide antitumor activity of photodynamic therapy : laser systems for PDT p. 267
