Novel pixel architecture with inherent background suppression for 3D time-of-flight imaging p. 1
Surface orientation imager with excluding capability of non-Lambertian reflectance p. 9
Photogrammetry for geological applications: automatic retrieval of discontinuity orientation in rock slopes p. 17
Boat's hull modeling with low-cost triangulation scanners p. 28
2D imaging and 3D sensing data acquisition and mutual registration for painting conservation p. 51
Topography reconstruction of specular surfaces p. 59
Evaluating the performance of close-range 3D active vision systems for industrial design applications p. 67
Capturing appearance p. 78
Stereoscopy application of spherical imaging p. 89
Extended view interpolation by parallel use of the GPU and the CPU p. 96
Combining 3D technologies for cultural heritage interpretation and entertainment p. 108
Virtualizing ancient Rome: 3D acquisition and modeling of a large plaster-of-Paris model of imperial Rome p. 119
Combined use of 2D images and 3D models for retrieving and browsing digital archive contents p. 134
Calibration and improvements of the high-resolution range-imaging camera SwissRanger p. 144
New multiple-camera calibration method for a large number of cameras p. 156
Influence of Bayer filters on the quality of photogrammetric measurement p. 164
Evaluation and correction of laser-scanned point clouds p. 172
A flexible mathematical model for matching of 3D surfaces and attributes p. 184
Improving accuracy and computation time of 3D reconstruction through an improved carving procedure p. 196
Efficient corner detector for 3D point crowd data and application to 3D modeling of structures p. 208
3D modeling of close-range objects: photogrammetry or laser scanning? p. 216
Model-based sparse 3D reconstruction for online body tracking p. 226
Three-dimensional measurement for small moving object p. 235
Integration of videogrammetry and terrestrial laser scanning for dynamic surface modeling p. 243
Digitization of the human body in the present-day economy p. 252
Realistic body modeling out of video sequences: first application to body parts p. 260
Conditions that influence the accuracy of anthropometric parameter estimation for human body segments using shape-from-silhouette p. 268
Most favorable camera configuration for a shape-from-silhouette markerless motion capture system for biomechanical analysis p. 278
Graph-based surface reconstruction from stereo pairs using image segmentation p. 288
Line extraction for city modeling using least-median of squares method p. 300
Photogrammetric bridging of GPS outages in mobile mapping p. 308
Three-dimensional model reconstruction for treasures of jadeite material from uncalibrated image sequences p. 320
A practical method of stereo camera calibration p. 332
Per-pixel camera calibration for 3D range scanning p. 342
Linear camera calibration from a single view of two concentric semicircles for augmented reality applications p. 353
Motion data index structure: an efficient indexing for spatio-temporal data of moving objects p. 362
