Active wavefront shaping and analysis  p. 1
Resolution enhancement technologies in optical metrology  p. 10
Recent developments in spectral interference microscopes  p. 22
Moire interferometry for engineering and science  p. 29
In-process shape and roundness measurements at turning machines using a novel laser Doppler profile sensor  p. 44
Cartesia : automated 3-point setup for metrology instruments in 3D CAD space  p. 56
Technological approaches by laser beam welding of aluminium alloys and influence of errors in manufacturing process  p. 68
A laser optical torquemeter for measuring the mechanical power furnished by a chirale turbine  p. 74
Qualitative analysis of laser cutting of CV joints for automobile industry  p. 82
Multispectral phase-crossing white-light interferometry  p. 88
Estimation of cyclic error due to scattering in the internal OPD metrology of the Space Interferometry Mission  p. 94
Characterization of an optical fiber spool to be used as reference standard for OTDRs distance scale calibration  p. 102
Measurement of the electrical resistance of aluminium samples in sulphuric acid solutions by optical interferometry techniques  p. 110
Absolute calibration of step height by a novel interferometric microscope  p. 121
Stress wave amplitude measurements for calibration of structural health monitoring sensors  p. 130
Accurate and highly resolving quadri-wave lateral shearing interferometer, from visible to IR  p. 134
Phase manipulation and optoelectronic reconstruction of digital holograms by means of LCOS spatial light modulator  p. 144
The interferometric measurement of diffusion coefficients in transparent media  p. 153
Algorithm for high-accuracy particle image position estimation in PIV applications  p. 163
Integration of probe systems in a nanopositioning and nanomeasuring machine  p. 168
Near-field optical magnetometry and magnetic imaging of nanomagnets  p. 173
Some measurement results for an elasto-optical force transducer  p. 181
Calculation and measurement of the Mueller matrix for an elliptical mirror  p. 189
Using the wavelet transform for processing signals of a counter of speckle  p. 198
Generalized treatment for dispersion  p. 205
2D thermography of organic coating behaviors at high temperatures  p. 210
Corner cube model for Microarcssec Metrology (MAM) testbed in Space Interferometer Mission (SIM)  p. 215
Proposed methodologies to reduce measurement error impact on coordinate measurement machines  p. 229
Optical path difference in a plane parallel uniaxial plate  p. 237
Laser interferometer for absolute distance measurement based on a tunable VCSEL laser  p. 246
The optical frequency method of distance measurement with sub-nanometer resolution  p. 252
Modulated external-cavity laser for highly resolved distance measurements  p. 258
Diffractive lateral-shearing interferometer for phase-shift mask measurement using an excimer laser source p. 270
Development of a horizontal interferometric dilatometer for gauge blocks p. 278
A phase-shifting technique for Jamin laser interferometry p. 286
Energy transfer characteristics of photorefractive wave mixing in BaTiO$_3$ at three wavelengths p. 292
Temperature surface measurements with a 3D velocity fluid flow measurement system using the same laser source and a single instrument p. 300
Ultrashort laser pulse characterization by three optical methods: autocorrelation, optical interference, and spectral analysis p. 305
Multipoint heterodyne vibrometry for measurements on unstable biomedical objects p. 314
Digital holographic interferometry for investigations in biomechanics p. 325
MRI segmentation by active contours model, 3D reconstruction, and visualization p. 333
Hybrid JTC using DSP technology p. 340
Laser metrology in food-related systems p. 347
Implementation and applications of a Fizeau-based fiber tip interferometer p. 355
Fiber optic distributed velocity sensor for precision measurements in microscopic and macroscopic flows p. 366
Uncertainties of the polarization parameters measurement in fiber optic devices p. 377
Application of the FORS-II for investigation of seismic rotation waves p. 385
Optical fiber sensors applications to the wear detection and fracture of cutting tools p. 394
Modeling, fabrication, and characterization of large-mode-area photonic crystal fibers with low bending loss p. 402
Analysis of refractometric optical fiber sensors: comparison between different forms of optical detection elements p. 409
Contact analysis of transversally loaded Bragg grating strain sensors p. 421
Analyses of signal-to-noise ratio in optical-fiber heterodyne-type laser Doppler anemometer p. 431
Fiber optic evanescent-wave sensor p. 443
Optical fiber current magnetic sensor based on intensity changes p. 448
Optical fiber current sensor based on a magnetic structure p. 452
NO$_2$ chemical oxidation doping effect on spin-coated poly(3-octylthiophene) thin films for NO$_2$ sensing applications p. 457
Photoacoustic methodologies by using diode laser as light source for precise measurements of thermal diffusivity for liquids p. 464
Photothermal radiometry analysis of charge transport p. 471
Instrumentation of absorption spectrum of an NH$_3$-filled cell to IR laser pulses using cavity-ring down technique p. 479
A novel integrated system for analysis of thermal depth profiles p. 485
Photopyroelectric method using a thermal wave resonator cavity for detection of phase transitions in agar p. 493
Testing of radiative transfer equations for biomedical applications p. 501
Measurements of changes in transmission spectra of human venous blood as a method for control of low-intensity He-Ne laser biomedical effect p. 509
Analysis of dental materials by photothermal radiometry
Measuring aspheric wavefronts with high accuracy using Hartmann test
Experimental study of the surface roughness in metals with different surface finishing by two-dimensional correlation of speckle pattern
Error analysis in the test of fast aspheric convex surfaces with a linear array of sources
Phasing a segmented mirror using the subapertures method
Testing a fast off-axis parabolic mirror using tilted null-screens
Physical theory of ronchigrams resulting from unequal strip-widths rulings
Surface metrology using laser trackers
3D optical measuring technologies and systems
3D image acquisition by fiber-based fringe projection
Application of microinterferometric tomography as an evaluation tool for phase micro-objects
Optical 3D reconstruction of retinal blood vessels from a sequence of views
Optical tomography of phase objects with phase-shifting interferometry and stepping wise shifted Ronchi ruling
Structured laser light and coordinate measuring systems integration for 3D metrology
3D shape detection based on a Bezier neural network of a light line
3D surface coordinate inspection of formed sheet material parts using optical measurement systems and virtual distortion compensation
Design and implementation of a system for the acquisition and three-dimensional virtual representation of the human face (tri-ident)
Toward the automatic pose computation via registration: new results on computing edges using FPGAs
Phase demodulation of interferograms with open or closed fringes
Asynchronous direct demodulation of spatiotemporal fringe patterns
Experimental interferogram analysis using a nonconventional genetic algorithm
Fringe normalization by using an interpolation algorithm
New improvements of the regularized phase tracking technique for the processing of non-normalized fringe patterns
Determination of forming limits of sheet metals by speckle interferometry
Measurement of residual stresses using a radial in-plane digital speckle pattern interferometer and local heating: recent advances
Optical measurement of mechanical stresses in diamond-like carbon films
Vibration measurements by pulsed digital holographic endoscopy
Residual stress measurement using indentation and a radial in-plane ESPI interferometer
Laser scanning technique for fatigue damage evolution detection
Detection of micromechanical deformation under rigid body displacement using twin-pulsed 3D digital holography
Fractal analysis of vibration amplitudes
Microdisplacement measurements with holographic gratings
Data amalgamation in the digitalization of 3D objects all over its 360 [degrees]
Reduced dynamical model of the vibrations of a metal plate  
Young's module measurement of an elastomer using ESPI  
Temperature measurements by laser beam deflection  
Uncertainty evaluation of displacements measured by ESPI with divergent wavefronts  
Aeolic vibration of aerial electricity transmission cables  
Laser diode noise impact on interferometric applications  
Crack inspection on tanks using shearography  
Multipoint optical fiber vibrometer
