Role of the advanced IR sounder in land surface remote sensing
Classification of forest growth stage using Landsat TM data
Monitoring urban growth using remote sensing, GIS, and spatial metrics
Exploiting spectral variation from crop phenology for agricultural land-use classification
Forest fuel moisture content estimation from MODIS data
Integrative modeling of hydrological, ecological, and economical systems for water resources management at river basin scale
Remotely mapping river water quality using multivariate regression with prediction validation
Preliminary results of the coupled CWRF-GOSSYM system
Climate impacts on hydro-power development in China
Measuring grassland structure for recovery of grassland species at risk
Urban water resources management for semi-arid region
Soil moisture prediction based on retrievals from satellite sensing and a regional climate model
Further studies on vegetation temperature condition index drought-monitoring model using AVHRR data
Estimating regional agricultural water use based on remote sensing data: a case study at Luancheng County of north China plain
Extracting vegetable field area from Landsat TM image for estimating vegetable water consumption: a case study in Luancheng County of Hebei Province, China

Cultivated land changes in China: the impacts of urbanization and industrialization

Applicability of linear regression equation for prediction of chlorophyll content in rice leaves
Modeling runoff and soil water balance under mechanized conservation tillage in dry land of north China
Contribution of farmland wind erosion to sand storms in northern China
Food potential of continental aquatic ecosystems in China
Estimation on the eco-water demands: a case study in an arid oasis system of Xinjiang, China
Grade agricultural soil loss amount by integrating GIS technology and USLE in upstream of Yangtze River, China
Monitoring and assessment on the land degradation in hilly karst Guangxi of China

Development of a data-acquisition program for an integrated temperature measurement system
Development and application of conservation tillage technologies toward sustainable agriculture in northeast China
The response of leaf area index to climate change during 1981-2000 in China
Simulations of a rainfall process in southeastern China with WRF and MM5
An analysis of seasonal and interannual variability of LAI during 1982 to 2004
Numerical simulation of summer 2003 climate in China region using RegCM3
Net primary productivity and its spatiotemporal patterns in Loess Plateau during 1981-200
Assessing the applicability of assimilating MODIS data products into crop growth models: a case study in Yucheng, ShanDong Province, China

Modeling the dynamics of urban sprawl and spatial landscape pattern in Beijing metropolitan area

Impact of urban sprawl on carbon uptake in Beijing metropolitan area

GIS grid calculation method application in urban eco-environment assessment: a case study of Longxi County in Gansu Province, China

Study on water consumption by vegetation evapotranspiration in the Mid-Yellow River region based on remote sensing data

Construction of surface boundary conditions for regional climate modeling in China by using the remote sensing data

The response of vegetation cover to precipitation and temperature in central/east Tibetan Plateau

Spatial pattern of forest cover changes in the northeast China since 1980s

Soil nutrient changes under artificial coniferous forests in the red soil hilly region in Southeast China

Seasonal dynamics of terrestrial net primary production in China

Monitoring spatiotemporal changes of urban vegetation abundance by normalized spectral mixture analysis (NSMA): the case study of Najing, China

Spectral red edge parameters for winter wheat under different nitrogen support levels

Grade agricultural soil loss amount by integrating GIS and USLE in upstream of Yangtze River, China

Controlled traffic conservation tillage using small to middle sized machinery in China

Calculating regional drought indices using evapotranspiration (ET) distribution derived from Landsat7 ETM data

Remote sensing and monitor system for a large poultry farm based on internet

Spatiotemporal variability of winter wheat condition based on TM data and geostatistics

Variations of NDVI and the relationship with climate in Huang-huai-hai region of China from 1981-2001

Study on monitoring freezing disasters in winter wheat by remote sensing and variational techniques

On variations in the growth/development stages of winter wheat and their response to climate

Energy saving in greenhouse ecosystems in north China

Monitoring the landscape change in the semi-arid areas: a case study in Yulin prefecture of Shaanxi, China

A preliminary study on soil erosion of the Longdong Loess Plateau region based on MODIS

River eco-environment water right and its calculation framework in water resources justification of construction projects

Analysis on ecological security in the soft rock area of Middle Yellow River: a case study of Changchuan watershed, Inner Mongolia, China

Assessment of gully erosion in a semi-arid catchment of the Loess Plateau, China, using photogrammetric techniques

Relationship between NDVI and the urban heat island effect in Beijing area of China
Xinjiang resources efficiency based on superior technical theory
