Optical engineering at Keck Observatory: design and performance of the telescopes, adaptive optics, and interferometer

Variable liquid lenses for electronic products

Research on the influence of secondary mirror shadow coefficient upon Pan-Cassegrain system

Opto-mechanical integrated analysis for optical system

Design approach for systems with toroidal optical elements featuring a generalized Schelmpflug condition

Integrated light-guide plates that can control the illumination angle for liquid crystal display backlight system

Micro electronic and macro optical parameters of the ITO films prepared by DC sputtering for electrochromic applications

Simplifying the conception of opto-mechanical systems thanks to direct integration of optical design capabilities in mechanical CAD software

The optical properties of titanium oxide films prepared by DC reactive magnetron sputtering

Generation of aberration polynomials in a Fourier optical processor using a liquid crystal display

Hygrothermal design of high stability telescope structure

Design and fabrication of W/Si multilayer mirrors for the K-edge of Ti

Current research activities in the field of multilayer for EUV, soft x-ray, and x-rays in IPOE

Optical thin films for high power LD-pumped Nd: YVO$_4$ 457 nm blue laser

Design of primary mirror for laser beam director

Key techniques of laser direct writing of fine lines on the spherical surface

Surface/subsurface observation and removal mechanisms of ground reaction bonded silicon carbide

Polarization properties of thin-film-coated prisms

Mode analysis of the UV-written channel waveguide

Application of maximum entropy principle in plane lapping

Novel computer-aided alignment method of optical systems based on genetic algorithm

Design and analysis of x-ray microscope of four mirrors working at grazing incidence

Characteristic-analysis of optical low pass filter used in digital camera

Optical and local current studies on InAs/GaAs quantum dots

A novel method for fabricating periodic micro domain structure in a ferroelectric crystal using a femtosecond laser

3D photoresist etching simulation using cellular automata

Optical damage computer generated holograms

The optical design of the stereo endoscope

Solution strategy of optimal dot pattern design for light guide use in backlight

Writing system for digital documents reader

Optical and hydrophobic nano-porous silica thin films with low refractive index

Experimental results and wear predictions with free-pinned petal tools
Study of CVD SiC thin film for space mirror
Medium precision optical testing of a fast concave elliptical mirror by a cylindrical null screen
Lie algebraic treatment of optical systems in higher aberration orders
Effect of UV irradiation on sol-gel optical films
Two novel methods for liquid refractive index or concentration measurement using reflex fiber optic sensors
Theoretical analysis and improving method for the contrast of image under water
Novel methods for measuring modulation transfer function for fiber optic taper
Sol-gel coating of transparent optical variable
Study of infrared AR and protection coating on MgF$_2$
Optical coatings optimization of semiconductor laser
Design and fabrication of broadband x-ray supermirrors
Design of soft x-ray multilayer polarizing elements
Circular gratings based on binary optics and their diffraction computer simulation

The influence of the secondary mirror position and the lightweight primary mirror on optical performances
Research on geometric model of grinding large and medium scales optical aspheric surfaces
Theoretical analysis of optical properties of dielectric coatings dependence on substrate subsurface defects
A review of the fabrication of optic fiber
Optimization of high-numerical-aperture objectives by splitting a singlet with control of higher-order aberration
Two absolute photonic gaps from 2D square compound lattices
Random and non-overlap dot generation for light guide used in LCD backlight by molecular dynamics method
Estimating luminance of single panel and dual panel light guide by luminous flux flow

Applications of reverse engineering in the fabrication of optical coatings with high performance
Study on preparation technology of GE$_x$C$_{1-x}$ film on ZnS substrate
A new algorithm for integrated image quality measurement based on wavelet transform and human visual system
The spot diagram of waveguide geodesic lens
Optical test for the primary mirror at a space telescope using a CGH null lens
Large working area F-Theta lens
The fluctuation of high-order aberration's sensitivity in ArF immersion lithography

Tolerance analysis of lenses with high zoom ratio
Interference characteristic analysis on RoF illumination
Measuring the contour of a wavefront using the irradiance transport equation (ITE)

Numerical analysis of compound aspheric lens design and fabrication
Researching Iris serial images quality assessment method based on HVS
Study on spherical aberration of imaging system constructed by fractional fourier transform
Design and fabrication of fluorescence fiber gratings
Ronchi test with substructured gratings
Line-contact machining of conic surfaces of revolution and error analysis
Design and fabrication of C/W hard x-ray supermirrors
New measures of the refractive index in liquids using speckle patterns
Design of infrared afocal zoom system
Use of a speckle correlation for object surface topography
Attempts to encourage secondary students to initiate university studies of physics at the University of Barcelona based on experiments related to optics
