Computational neuroimaging: maps and tracts in the human brain
Local luminance effect on spatial summation in the foveal vision and its implication on image artifact classification
Evaluating contrast sensitivity
Spatio-velocity CSF as a function of retinal velocity using unstabilized stimuli
A basis for cones
High-dynamic-range scene compression in humans
Computational model of lightness perception in high dynamic range imaging
Remembrance of scanpaths past: experiments with Larry Stark
The scanpath theory: its definition and later developments
A new metric for definition of gaze area from the geometrical structures of picture composition
Visual search and eye movements in novel and familiar contexts
Guiding the mind's eye: improving communication and vision by external control of the scanpath
Combining bottom-up and top-down attentional influences
Effects of spatial correlations and global precedence on the visual fidelity of distorted images
Pseudo no reference image quality metric using perceptual data hiding
Attention-based color correction
Contrast enhancement of medical images using multiscale decomposition
Alpha stable human visual system models for digital halftoning
Study of asthenopia caused by the viewing of stereoscopic images: measurement by MEG and other devices
Perceptual image quality improvement for large screen displays
LCD motion-blue analysis, perception, and reduction using synchronized blacklight flashing
Human vision-based algorithm to hide detective pixels in LCDs
Using optimal rendering to visually mask defective subpixels
Perceptual study of the impact of varying frame rate on motion imagery interpretability
Color preference and perceived color naturalness of digital videos
Stabilising viewing distances in subjective assessment of mobile video
Predicting subjective video quality from separated spatial and temporal assessment
Handling of annoying variations of performances in video algorithm optimization
Structural similarity quality metrics in a coding context: exploring the space of realistic distortions
Lossy compression of high dynamic range images and video
A closer look at texture metrics for visualization
M-HinTS: mimicking humans in texture sorting
Inference and segmentation in cortical processing
Perceptually based techniques for semantic image classification and retrieval
Is Wolfflin's system for characterizing art possible to validate by methods used in cognitive-based image-retrieval (CBIR)?
Symbol discriminability models for improved flight displays
Is haptic watermarking worth it?
Display conditions that influence wayfinding in virtual environments
Modeling the time course of attention signals in human primary visual cortex
Advances in multifocal methods for imaging human brain activity
Psychophysical measurement for perceptual image brightness enhancement based on
image classification
Simple color conversion method to perceptible images for color vision deficiencies

Using words as lexical basis functions for automatically indexing face images in a
manner that correlates with human perception of similarity
Subjective video quality evaluation for multimedia applications
Texture segmentation using adaptive Gabor filters based on HVS
