New blind steganalysis and its implications
Statistical modeling and steganalysis of DFT-based image steganography
Fourth-order structural steganalysis and analysis of cover assumptions
Application of conditional entropy measures to steganalysis
Improving steganalysis by fusion techniques: a case study with image steganography

A two-factor error model for quantitative steganalysis
Compression-based steganalysis of LSB embedded images
Linguistically informed digital fingerprints for text
Attacks on lexical natural language steganography systems
Natural language watermarking: challenges in building a practical system
Scale estimation in two-band filter attacks on QIM watermarks
High-rate quantization data hiding robust to arbitrary linear filtering attacks
Countermeasure for collusion attacks against digital watermarking
The blind Newton sensitivity attack
Achieving non-ambiguity of quantization-based watermarking
Reference point detection for improved fingerprint matching
Analyzing handwriting biometrics in metadata context
3D face recognition by projection-based methods
Face biometrics with renewable templates
Safety of templates in biometric person authentication using error-correcting code

On the comparison of audio fingerprints for extracting quality parameters of compressed audio
Fingerprinting with wow
Limited distortion in LSB steganography
Multi-class blind steganalysis for JPEG images
MPSteg: hiding a message in the matching pursuit domain
Stego sensitivity measure and multibit plane-based steganography using different color models
Zero-knowledge ST-DM watermarking
Compression and rotation resistant watermark using a circular chirp structure
Rotation/scale insensitive spread spectrum image watermarking game
New results on robustness of secure steganography
Sphere-hardening dither modulation
Secret dither estimation in lattice-quantization data hiding: a set membership approach
Performance analysis of nonuniform quantization-based data hiding
Detecting digital image forgeries using sensor pattern noise
Fingerprinting digital elevation maps
Information embedding and extraction for electrophotographic printing processes
An online system for classifying computer graphics images from natural photographs
Text data-hiding for digital and printed documents: theoretical and practical considerations
E-capacity analysis of data hiding channels with geometrical attacks
Image data-hiding based on capacity-approaching dirty-paper coding
Wet paper codes with improved embedding efficiency
New modulation-based watermarking technique for video
Selective encryption for H.264/AVC video coding
Using entropy for image and video authentication watermarks
Temporal synchronization of marked MPEG video frames based on image hash system
Toward robust compressed-domain video watermarking for H.264
Selective video encryption of a distributed coded bitstream using LDPC codes
VLC pair free: a paradigm for MPEG-2 watermarking
Information-theoretic analysis of electronic and printed document authentication
Joint data hiding and source coding with partially available side information
Asymmetrically informed data-hiding optimization of achievable rate for Laplacian host
Some theoretical aspects of watermarking detection
A framework for the design of good watermark identification codes
On the fundamental tradeoff between watermark detection performance and robustness against sensitivity analysis attacks
Profiles for evaluation: the usage of audio WET
A benchmark assessment of the WAUC watermarking audio algorithm
Transparency benchmarking on audio watermarks and steganography
Shape quality measurement for 3D watermarking schemes
A reliability engineering approach to digital watermark evaluation
The watermark evaluation testbed (WET): net functionalities
Protection and governance of MPEG-21 music player MAF contents using MPEG-21 IPMP tools
Watermarking of 3D objects based on 2D apparent contours
Quality assessment of watermarked 3D polygonal models
Reducing the processing time of the hierarchical watermark detector when applied to unmarked images
Exploring QIM-based anti-collusion fingerprinting for multimedia
Perceptual hashing of sheet music based on graphical representation
A web-oriented and interactive buyer-seller watermarking protocol
Matrix embedding for large payloads
Simple reversible watermarking schemes: further results
New detector for spread-spectrum based image watermarking using underdetermined ICA
Optimal detector for an additive watermarking scheme based on human auditory system
A hypothesis testing approach for achieving semi-fragility in multimedia authentication
A DWT-based robust semi-blind image watermarking algorithm using two bands
Evaluating the visual quality of watermarked images
