Army requirements for micro and nanotechnology-based sensors in weapons health and battlefield environmental monitoring applications
Frequency tuning of film bulk acoustic resonators
Modeling of passive wireless sensors for RFID tag applications
Carbon nanotube array smart materials
Biomolecules as nanomaterials: interface characterization for sensor development

Synthesis of oriented ZnO nanostructure arrays for solar cell applications
Organic thin films based sensor applications
Ultrasonication of bismuth telluride nanocrystals fabricated by solvothermal method
Hydrogen generation using ruthenium nano-rod array electrodes
Novel dielectrophoretic filtration methods and designs
Nickel electrodeposition studies for high-aspect-ratio microstructure fabrication for MEMS
Micro-patternning on cellulose EAPap for biodegradable MEMS
Science and art of synthesis and crafting of nano/microstructures and devices using ion-crafted templates: a review
Aligned nanowire structures on silicon and flexible substrates and their applications
Nanowire array for wireless neural probe: modeling and simulation
Magnetic nanotubes and their potential use in neuroscience applications
Lifetime characterization of capacitive power RF MEMS switches
Micromachined piezoelectric resonator at MHz application
Design and applications of flexible dipole rectenna for smart actuators and devices

High-frequency SAW oscillator sensor to measure DNA immobilization and hybridization
Multifunctional surface acoustic wave sensor for monitoring environmental and structural condition
Sensor-integrated polymer actuators for closed-loop drug delivery system
Neuroelectronics and neurosurgery
Application of probe manipulator to repair probe cards
Self-assembled polymer MEMS sensors and actuators
Photonic crystal sensor systems for sub-micron damage detection, quantification, and diagnosis
Self-assembled nanostructured multilayered spectral filters
CMOS chip chemical detection system comprising mass-sensitive nanocantilevers
Future trends in electronic packaging
A new device for characterization of mechanical stress caused by packaging processes

Manipulation by electrostatic force-assisted probes
A novel lightweight piezo-composite actuator micropump
Magnetically actuated micropumps using an Fe-PDMS composite membrane
Nano-interconnection for microelectronics and polymers with benzo-triazole
Fabrication methods of micrometallic closed cellular materials
Packaging of an iron-gallium nanowire acoustic sensor
Reliability of ultra-thin insulation coatings for long-term electrophysiological recordings
Utilizing chaotic excitation of microelectromechanical systems (MEMS) for microstructure fault detection
A comparative study of MOEM pressure sensors using MZI, DC, and racetrack resonator IO structures
Transfer function characterization of thermally-actuated displacement-amplified micro-electromechanical systems (MEMS)
Experimental validation and testing at components for active damping control for micromachined mechanical vibration isolation filters using electrostatic actuation

Wireless power technology for application-specific scenarios of high-altitude airships
Ultra-wideband RF/microwave MEMS switches for wireless communications
Design and development of microstrip patch antenna at Ka-band using MEMS technology
