Unmanned/unattended naval undersea sensor systems: examples of today’s technologies and challenges for the future

Acoustic detection and localization from a tethered aerostat during the NATO TG-53 test

Distributed acoustic sensor data processing for target classification

Current capability of a matured disposable acoustic network

Robust beamforming algorithms for acoustic tracking of ground vehicles

New seismic unattended small size module for footprint detection

Seismic detection algorithm and sensor deployment recommendations for perimeter security

Unconventional optical imaging using a high-speed neural network based smart sensor

Extending the range and performance of non-line-of-sight ultraviolet communication links

Analysis of visible band sensors for personnel detection

Threat mediation via a real-time stereoscopic catadioptric omnivision system

Ultra-wide band ground wave communication for a distributed sensor network

Associated neural network independent component analysis structure

Double precision nonlinear cell for fast independent component analysis algorithm

Hybrid power for wireless sensors

The core transceiver: a software defined radio for UGSS applications

New classification results using temporal and spatial fusion

The design of a broadband ocean acoustic laboratory: detailed examination of vector sensor performance

Reconfigurable transceiver architecture for unattended ground sensors (UGS)

Enabling unattended data logging and publication by data model change detection and environmental awareness

Coastal microbial fuel cell: scaling laws and systems

Target tracking and localization using infrared video imagery

Trackability in complex situations and environments

NATO TG-53: acoustic detection of weapon firing joint field experiment

Seismic array monitoring of mortar fire during the November 2005 ARL-NATO TG-53 field experiment at YPG

Wide aperture arrays for locating impulsive sound sources in air and underwater

Sound detection and localization of small arms, mortars, and artillery guns

Operating Ferret on a patrol boat

Disposable sensor system: low cost UGS for urban operations

Airborne plume tracking with sensor networks

A high-performance imagery system for unattended ground sensor tactical deployments

Multimodal unattended ground sensor (MMUGS)

Human signatures in urban environments using low cost sensors

Air launch wireless sensor nodes (ALSN) for battle damage assessment (BDA)

Smart unattended sensor networks with scene understanding capabilities
The jellyfish: smart electro-active polymers for an autonomous distributed sensing node

Aircraft detection using unattended ground sensors
