Sources of radiations on the basis of capillary discharges
Current density and exposure sequence effect in electron lithography
Ultra shallow p+-n junctions in Si produced by plasma immersion ion implantation
Low-temperature annealing of ion-doped layers of silicon in hydrogen atom flow
Formation of conductive structures in insulate layers by selective removal of atoms technique
Dense arrays of Ge nanoclusters induced by low-energy ion-beam assisted deposition on SiO$_2$ films
Diffusion and phase formation in ternary silicate systems framed by an ion bombardment
Radiation-induced structure modification in monocrystalline silicon under high-energy C$^{6+}$ irradiation
A self-consistent model for the HCl dc glow discharge: plasma parameters and active particles kinetics
Measurement of polymerizing fluorocarbon plasma parameters: dynamic Langmuir probe technique application
From diffraction grating to photonic crystal: opaque bands formation
Boron distribution profiling in asymmetrical n$^+$-p silicon photodiodes and new creation concept of selectively sensitive photoelements for megapixel color photoreceivers
Optical properties of silicon nanopowders formed using power electron beam evaporation
Synthesis of A$^{II}$B$^{VI}$ semiconductor nanocrystals by electrochemical deposition and SILAR techniques
Morphology and structure of PZT films
Silicide/high-k dielectric structures for nanotransistor gates
Degradation of thin copper conductors because of low temperature melting
Sol-gel derived Sb-doped SnO$_2$/SiO$_2$ nano-composite thin films for gas sensors
Controlled change of structure and properties of nanometer polymer layers deposited by electron beam polymerization from vapour phase
Spin relaxation of holes in Ge quantum dots
Electronic transport through silicon nanocrystals embedded in SiO$_2$ matrix
Peculiarities of the electrical characteristics of the pseudomorphous SiGe/Si MODFET structures with a corrugated surface
Controlled interference effects of spatial reproduction and multiplication for electron waves in semiconductor 2D nanostructures
Surface scattering in SOI field-effect transistor
Structural and electrophysical properties of pseudomorphic GaAs/InGaAs/Ga/As quantum wells: effect of thin central AlAs barrier
The influence of relaxation on the structure and boundary shape of adatom islands on an incommensurable substrate
Influence of thermodiffusion parameters on the concentration profiles
Josephson junctions with ferromagnetic materials
Calibration of quantum detector of noise based on a system of asymmetric superconducting loops
Sd-exchange switching in magnetic junctions having non-pinned current carrier spins

Moessbauer spectra of nanomagnets within rotating hyperfine field
Exchange interactions in a ferrimagnetic ring
Formation of ordered arrays of Ag nanowires and nanodots on Si(557) surface
Synthesis of nanowires by pulsed current electrodeposition
Forming matrix nanostructures in silicon
Ge nanoclusters in GeO[subscript 2] : formation and optical properties
Factors effected on nanoporous anodic alumina ordering
Combined electromagnetic mirror as the probable breakthrough tool in an ion nanotechnology
Metrology in linear measurements of nano-object elements
Simultaneous fitting of several x-ray rocking curves from different crystallographic planes of multilayer heterostructures
Linear sizes measurements of relief elements with the width less than 100 nm on a SEM

Structural and nonlinear-optical studies of ultrathin Si/SiO[subscript 2] multiple quantum wells
Characterization of strained-Si/SiGe/Si heterostructures with capacitance methods
Photoluminescence of 2D electronic [delta]-layers in lateral non-homogeneous nano-structures based on GaAs
Rearrangement of resonant-funneling structure in the electric field revealed by complementary photoluminescence and vertical transport characterization of the GaAs/AlGaAs long-period superlattices
The surface roughness investigation by the atomic force microscopy, x-ray scattering, and light scattering
X-band SPDT switch MMIC based on directional coupler key
Non-volatile electrically reprogrammable memory on self-forming conducting nanostructures
Thermomigration technology for silicon ball grid array package fabrication
Calculation of secondary charge carrier current in submicron channel MOSFETs at stress regimes of operation
Effective electrostatic discharge protection elements for CMOS circuits
Investigations of bipolar magnetotransistor
Combined method of copper electroplating deposition and low temperature melting for damascene technology
An automatic synthesis method of compact models of integrated circuit devices based on equivalent circuits
Universal MOSFET parameter analyzer
High-speed bistable MEMS commutators
Use of thermomigration in MEMS technology
Nonequilibrium diagrammatic technique for nanoscale devices
Monte Carlo simulation of device structures with one-dimensional electron gas
Complex simulation of electron process of deep submicron MOSFET based on energy balance equation
Compact physical modeling of fully depleted SOI MOSFET
Simulation of physical processes in nanoelectronic devices with the use NANODEV system
Simulation of the vertical MOSFET with electrically variable source-drain junctions

Simulation of RTD with the use of one- and two-band combined models
Improved modeling of the photoconductivity of amorphous semiconductors for the purposes of the microelectronics
Numerical algorithms for modeling of diffusion of As implanted in Si at low energies and high fluences
Simulating the process of dielectric substrate surface cleaning in high-voltage gas discharge plasma
Nonequilibrium properties of SISIS structure under microwave radiation
