The simulation study of Kelvin ship wake imaging by multi-look directions SAR
Near field 3-D scene simulation for passive microwave imaging
Shadows detection and removal of IKONOS imagery based on spatial-distribution relations
CMODIS/SZ-3 data procession and marine environment products
Extraction of land cover change information from ENVISAT-ASAR data in Chengdu Plain
Radargrammetry DEM from RADARSAT imageries and accuracy validation: a case study in Malaysian rainforest areas
A new net primary production estimating model using NOAA-AVHRR applied to the Haihe Basin, China
Dense digital surface model and TrueOrtho products: a way toward a new generation of cartographic products for China
Spectral analysis and information extraction of crop disease by multi-temporal hyperspectral images
Alteration/minerals information extraction from EO-1 Hyperion data
Application of IKONOS image and BP model to evaluate potential of urban land intensive use
Multi-angle polarized reflection spectrum of soil
Apparent reflectance and its applications using Resourcesat-1 remote sensing data
Vegetation change detection for urban areas based on extended change vector analysis
The universal cloud detection algorithm of MODIS data
Automatic extraction of tree crowns from aerial imagery in urban environment
Application of high spatial resolution airborne hyperspectral remote sensing data in thematic information extraction
Evaluating the potential of ENVISAT/ASAR data in monitoring the Poyang Lake wetland
Extracting crop area planted based on genetic algorithm with neural network using MODIS data
The railway design study based on seamless stereo orthoimage
Visual interpretation of synthetic aperture radar data for assessing land cover in tropical savannas
Narrowband vegetation index performance using the AVIRIS hyperspectral remotely sensed data
Design and application of digital close range photogrammetric network with variant interior elements
A method of edge detection based on improved canny algorithm for the lidar depth image
Feature extraction with LIDAR data and aerial images
Automatic building extraction from LIDAR point data in urban areas
Deriving winter wheat characteristics from combined radar and hyperspectral data analysis
Illicit vessel identification in inland wafer using SAR image
Semiautomatic extraction of building information and variation detection from high resolution remote sensing images
Linear features adaptive extraction from remote sensing image based on beamlet transform
Features of merchant ship in high-resolution spaceborne SAR imagery
Automated registration of sensor images based on object extraction
An algorithm for pavement crack detection based on multiscale space
Extraction and change detection of urban impervious surface using multitemporal remotely sensed data
Extraction of linear features on SAR imagery
Multilevel spatial semantic model for urban house information extraction automatically tram QuickBird imagery
Water extraction based on self-fusion of ETM+ remote sensing data and normalized ratio index
A new edge detection algorithm
Automated targets detection based on level set evolution using radar and optical imagery
Texture pattern analysis of main geographical objects in QuickBird imagery
A novel image change detection method based on enhanced growing self-organization feature map
Object-oriented information extraction of forest resources from high resolution remote sensing
Multiscale object-oriented change detection over urban areas
Edge detection of remote sensing image based on Wold-like decomposition
A new approach of automatic extracting features information based on remote sensing image
A semi-automatic method based on level set for areas feature extraction from aerial and satellite images
An automatic road segmentation algorithm using one-class SVM
The utility of texture analysis to improve per-pixel classification for CBERS02's CCD image
Filtering LIDAR intensity image based on orientation gradient of distance image
Texture classification of aerial image using Bayesian networks
Feature preserving compression of high resolution SAR images
The theory of adjustment applied in road data collecting and optimum designing of road

A texture-based approach for extracting residential areas from high-resolution imagery
Multiscale image segmentation and its application in image information extraction

Object-oriented classification of remote sensing data for change detection
Segmentation of wooden members of ancient architecture from range image
A Pareto evolutionary artificial neural network approach for remote sensing image classification
Remote sensing image texture classification based on Gabor wavelet and support vector machine
SVG-based remote sensing image visualization and processing
Automatic building extraction and segmentation directly from lidar point clouds
3D reconstruction of wooden member of ancient architecture from point clouds
Research on filter processing of LIDAR data
Classification by using wavelet transform on multispectral images
Sweep-line-based filtering of airborne laser scanning data
An improved ant colony algorithm to solve knapsack problem
The atmospheric correction of MODIS imagery for turbid coastal waters
The atmospheric correction procedure for CMODIS
Image matching for digital close-range stereo photogrammetry based on constraints of Delaunay triangulated network and epipolar-line
Image fusion for automatic detection and removal of clouds and their shadows
Atmospheric correction of AISA based on MODTRAN4
Precise texture modeling with 3D laser scanning
Content-based high-resolution remote sensing image retrieval with local binary patterns
Remote sensing image fusion based on frequency domain segmenting
Cloud-top height retrieval from polarizing remote sensor POLDER
Study of check method in geometry precision for DOM
Matching of SAR image based on support vector machine
Total rectangle matching approach for road extraction from high-resolution remote sensing images
Research on retrieval of remote sensing images based on shape feature
Retrieval of optical depth of dust aerosol over land using two MODIS infrared bands

ENVISAT ASAR orbit error analysis and case study
Some new classification methods for hyperspectral remote sensing
Developed Kalman filter procedure for formation flying satellites SAR high-resolution imaging
Self-adaptive repair approach for color composite DMC images
An HVS-based location-sensitive definition of mutual information between two images

Accuracy and simulation of airborne three-line scanner CCD image
RS- and GIS-based study on landscape pattern change in the Poyang Lake wetland area, China
A spectral-restored fusion method based on wavelet-packet transform
