Influence of substitution on the T-T absorption spectra in furocoumarins
Theoretical investigation of electric and magnetic properties of molecules and clusters
Calculation of the energy levels and wave functions of atoms by Hartree-Fock method with local exchange
The procedure of determination of diatomic spectroscopic and molecular parameters from line positions of several isotopomers
Computer experiment of atmospheric oxygen absorption by water clusters
Potentialities of gaseous biomarkers detection against the main atmospheric components with gas analyzer based on CO$_2$ laser
Effect of variations of the greenhouse gas concentrations on the solar shortwave radiation transfer
Database of structure, energy, and spectral characteristics of molecular complexes in atmosphere
Beams with arbitrary field profiles in turbulence
Particle and speckle imaging velocimetry applied to a monostatic LIDAR
Spectra of strong scintillation caused by large-scale anisotropic stratospheric irregularities, in spacecraft-based observations
Scaling in processes of laser radiation randomization
The statistical analysis of received time-series signals from the laser illumination of remote objects through turbulence
Radar tomography
Stochastic model of electromagnetic wave propagation in stratified media including the semitransparent object and inhomogeneous flow of scatterers
Toward an interferometer at Dome C, Antarctica: measurement of the atmospheric coherence time
Formation of optical beams in turbulent atmosphere with precipitation
Laser beam divergence meter for lidar systems based on integral optics elements
Maximum likelihood parameter estimation of a laser system using return photons
Seeing within the tractional Brownian motion model for the turbulent wave-front phase

Angle-of-arrival variance behavior and scale filtering in indoor turbulence
Behavior of laser beam wandering with turbulent path length
Monte Carlo technique vs. brightness function approach for problem of speckle-field propagation through a turbulent medium
Estimates of the error caused by atmospheric turbulence in optical determination of the orientation angle of a series of reflectors
Estimates of the error caused by atmospheric turbulence in determining an object's motion speed using a digital camera
Influence of photodetector response time on operation of monostatic and bistatic airborne meters of turbulence: part I
Influence of photodetector response time on operation of monostatic and bistatic airborne meters of turbulence: part II
Measurements of characteristics of intradome astroclimate for the AZT-33 Astronomic Telescope (Sayan Solar Observatory)
Measurements of local astroclimate characteristics near the Large Solar Vacuum Telescope
A model of short-range forecast of homogeneous atmospheric boundary layer parameters in view of solving the problems of laser beam propagation in the atmosphere

Experimental studies of swirling fire jets
Experimental study of laser radiation propagation through a high-temperature swirling fire jet
Criterion of the efficiency of turbulent fluctuations correction with deformable mirror
Processes of stimulated emission and two-photon induced fluorescence of organic dye in the dielectric microcavities at ultrashort laser pulses influence

Improving sensitivity of laser-induced breakdown spectroscopy using laser plasma interaction
Applying wavelets and evolutionary algorithms to automatic image enhancement
Image processing using evolutive neural network
Research of features of the ocean circulation by MODIS
The vectorial small angle modification of the spherical harmonics method for an arbitrary angle of irradiance of a slab
About the mathematical model of three-dimensional radiative transfer problems in a turbid medium
Radiation distribution within space-limited dispersion medium
The relation far-red to red chlorophyll fluorescence of phototrofs as a parameter of concentration of the reactionary centers of the first photosystem

Review of acoustic methods of sounding of the atmospheric boundary layer (1996-2006)

Aerosol dynamics above the water area of the Peter the Great Bay during the dust storm in the Gobi Desert
Mathematical model of crystal cloud particles over the angles of their big diameters' deviation from the horizontal plane
Investigations of microphysical and chemical composition of aerosol in near-water layer of the atmosphere over the White Sea
Development of the code MaexPro for calculation atmospheric aerosol extinction in the marine and coastal surface layer
Relationship between heights of homogeneous atmosphere and mixing layer of submicron aerosol
Investigation of seawater pollution on the Black Sea Romanian coast
Laser-induced fluorescence spectra dynamics of the seawater bio-optical components during phytoplankton cells inhibition
Climatic factors impact on bio-optical sea water features
Azimuth orientation of crystal-cloud particles due to wind speed pulsations: mathematical model
Seasonal variability of diurnal behavior of concentrations of submicron aerosol and absorbing substance in coordinates of sun elevation
Influence of the wind conditions on aerosol extinction in the sea and coastal atmosphere surface layer
Variations of the characteristics of the aerosol optical depth under conditions of forest fires
Transformation of the pyrolysis smoke particle size spectrum in a closed volume
Variations of aerosol microstructure under the effect of smoke as assessed from the results of inverting the data of spectral optical measurements

Influence of meteorological conditions on the spread and transformation of anthropogenic admixtures over the South Pribaikalie

The effect of fires on the intensity of electric field

Iterative method of separation of the extinction coefficients into two components

Nonparametric robust regression estimate

Laser gas analyzers for studying kinetics of gas exchange between vegetation biosystems and atmosphere

The use of frequency converter of femtosecond laser radiation in broadband lidar gas analysis of atmosphere

Passive method for cloud base height detection

Photocurrent statistics for a lognormal distribution of radiative intensity: numerical experiment

Study of atmosphere characteristics using ultra-high energy cosmic ray and [\(\lambda\)= 532nm] LIDAR

On the influence of large-scale circulation on volume sound scattering in the Pacific Sector of the Antarctic

Estimation of the content and parameters of a fluorescent fraction of dissolved organic matter

Possibility of diagnostics of tree response to the environmental effects from CO\([2]\) content in tree rings

Proton solvates in a water environment and their influencing on fluorescent properties of organic molecules

Latitudinal variations of Northeast Asia cloudiness during stage of increasing of the activity of 23rd solar cycle

Quasibiennial oscillation in variations of vertical distribution of midlatitude stratospheric ozone and aerosol

Observations of VLF-radio station signals and VLF-noise during a solar eclipse 29.03.06

Airplane research of a vertical structure of concentration and disperse structure of troposphere aerosol in the interest of problems of vision in an atmosphere

Methods of sensitivity theory and orthogonal decomposition for studying climate dynamics and pollution

Influence of a solar eclipse on Doppler frequency shift of signal from upper atmosphere

Reconstruction of disturbance spatial structure for upper atmosphere using measurements tram dense GPS network GEONET

Studies of artificial airglow emission at 557.7 nm (green line) of upper atmosphere caused by Sura facility

Angle variations distribution of SW signal

Research of atmosphere electricity parameters in the high-mountain stations

Satellite microwave scanner radiometry data using for analysis of statistics of tropical cyclone generation criterion in the Atlantic Ocean

Astrophysical and geophysical causes of hydrospheric, atmospheric, and climatic variations

Circulation conditions of abnormally cold winter of 2005-2006 over Siberia
Estimation of the effect of aerosol smoke generation above the area of a prospective earthquake

Influence of stratospheric warming on 557.7 nm airglow variations

The possible cause of the change of the minimum and maximum surface air temperatures in the second half of the 20th century

The climatic features of the atmospheric boundary layer above the south of western Siberia

Calibration system of HF multichannel radio receiver system

Estimation of critical frequency and height maximum for path middle point on evidence derived from experimental oblique sounding data: comparison of calculated values with experimental and IRI values

The solid information system for radiosounding data of upper atmosphere
