Harvesting of electrical energy from a backpack using piezoelectric shoulder straps

Energy harvesting using optimized piezoelectric microcantilevers
Design method for piezoelectric bending generators in energy harvesting systems
Analysis of PMN-PT and PZT circular diaphragm energy harvesters for use in implantable medical devices
Adaptive vibration energy harvesting
A comparison between the standard and SSHI interfaces used in piezoelectric power harvesting
Agglomeration of magnetorheological fluid mass to an immersed vibrating electromagnet
Alternative power source for magneto-rheological dampers
Study of a magneto-rheological grease (MRG) clutch
Rheological behavior of magneto-rheological grease (MRG)
Structural optimization of clutch activated by magnetorheological fluid
Study of a magneto-rheological grease (MRG) damper
Symbiotic structures to significantly enhance space missions
Hybrid acoustically layered foam (HALF) foam for improved low-frequency acoustic mitigation for launch fairings
Development of a SMA hybrid composite jet engine chevron concept
Ornithopter flight stabilization
Evolutionary flight and enabling smart actuator devices
Post-buckled precompressed (PBP) subsonic micro flight control actuators and surfaces
Insect cyborgs : a new frontier in flight control systems
Perching aerodynamics and trajectory optimization
Chemoelectrical energy conversion of adenosine triphosphate
Force control of ER fluid based haptic device in virtual environment
Experimental parametric study of a biomimetic fish robot actuated by piezoelectric actuators
A small and fast piezo-actuated legged robot
Effects of density and cell morphologies on the shape memory effect of a porous shape memory polymer
Microscale damping using thin film active materials
Design optimization of shape memory alloy active structures using the R-phase transformation
Nonlinear dynamics and chaos in a shape memory alloy pseudoelastic oscillator
On semi-active enhancement of the dissipation provided by piezoelectric films
Generation of quasi-resonance by variable damping
On the effect of electrical uncertainties on resonant piezoelectric shunting
Optimal piezoelectric switching technique for vibration damping
Shear thickening fluids as a tunable damping element : experimental results and modeling
A simple model for the prediction of the discrete stiffness states of a homogeneous electrostatically tunable multi-layer beam
Passive vibration damping with magnetostrictive composite material
Fluidic flexible matrix composites for autonomous structural tailoring
Microfluidic systems for reconfigurable RF surfaces and systems
Controlling nanoparticle aggregation in colloidal microwave absorbers via interface chemistry
Circulatory system for unmanned air vehicles
Full-scale flight tests of aircraft morphing structures using SMA actuators
Piezoelectric-hydraulic pump based band brake actuation system for automotive transmission control
Effectiveness enhancement of a cycloidal wind turbine by individual active control of blade motion
Analysis of the vibration localization phenomenon in rotationally periodic structures using a homogenized model
Work of PZT ceramics sounder for sound source artificial larynx
Beams with controllable flexural stiffness
Modal analysis of stepped piezoelectric beams
System integration of the Utah electrode array using a biocompatible flip chip under bump metallization scheme
Smart vortex generator transformed by change in ambient temperature and aerodynamic force
Design and numerical evaluation of an innovative multi-directional shape memory alloy damper
Optimal excitation of a cylindrical shell by piezoelectric actuators
Adaptive and controllable compliant systems with embedded actuators and sensors
Metal Rubber sheet and fabric materials and devices
Test/analysis comparison of piezoelectric patch local behavior for vibroacoustic active control application
A new designing concept for multifunctional structural material systems
Zero-power shock sensors using bistable compliant mechanisms
Electric field sensor based on core-replaced optical D-fiber
Analysis, construction, and testing of a large displacement bistable piezoelectric actuator
Active mounts for marine application: the BMBF research project "active aggregate mounts to reduce structure vibrations and structure-borne sound transmission"
Studies on small circular membrane mirrors with electrostatic cictuation and closed loop control
Integral control of collocated smart structures
Performance evaluation of a new type of jetting dispenser using piezoelectric actuator
Autonomous-decentralized smart structural control scheme: variable slip-force level damper control with microprocessor
Adaptive positive position feedback for energy absorption in acoustic cavities
Broadband noise and vibration reduction for lightweight chassis design using smart structure technologies
Vibration suppression of hull structure using macro fiber composite actuators and sensors
Nonlinear modeling of piezoelectric layered beams
Modeling of piezo-flexural nanopositioning systems subjected to rate-varying inputs
Negative capacitance shunts for vibration control and suppression of reactive input power on rectangular panels
Fuzzy control for nonlinear structure with semi-active friction damper
In-plane vibration of membrane strips and sheets with piezoelectric actuation and sensing
Revolutionary transitions of GE technology in NDE prognostics and health monitoring
