A novel method to evaluate the performance of pan-sharpening algorithms
Real-time object-based image registration using improved MRAN
Convergence rate improvement in NMI-based multisensor image registration
Signal-to-noise ratio for cross-sensor fusion approach
Real-time EO/IR sensor fusion on a portable computer and head-mounted display
Fusion and kernel type selection in adaptive image retrieval
Merging infrared and color visible images with a contrast enhanced fusion method
Multi-sensor detection and fusion technique
Novel classification fusion techniques for military target classification
Classifier combination and feature selection methods for polarimetric SAR classification
A Bayesian framework for ATR decision-level fusion experiments
Operating condition modeling for ATR fusion assessment
A full-scale prototype multisensor system for fire detection and situational awareness
A Markov game theoretic data fusion approach for cyber situational awareness
H[^2]LiFT : global navigation simulation ship tracking and WMD detection in the maritime domain
Fusion of disparate information sources in a hybrid decision-support architecture
Collective agents interpolative integral (CAII) for asymmetric threat detection
Real-time data fusion of road traffic and ETC data for road network monitoring
Real-time target tracking simulations in large disparate sensor networks
Prospects for dynamic ISR tasking and interpretation based on standing orders to sensor networks
Selection of fusion operations using rank-score diversity for robot mapping and localization
Maximum likelihood ensemble filter applied to multisensor systems
Assessing the value of information in a fuzzy cognitive map
Sensitivity analysis of an information fusion tool : OWA operator
Application of a static and dynamic united decoupling method for non-gyro inertial measurement unit
Digital terrain mapping from multispectral and high-resolution satellite data for defense studies
Multisensor fusion of images for target identification
