Atomic force microscopy study on the attachment of E. coli and S. aureus to a patterned surface of different materials
The molecular adsorption-type endotoxin detection system using immobilized [epsilon]-polylysine
Analysis and feasibility of chemical recording using thermosensitive liposomes
DNA-conjugated metal nanoparticle for bioanalytics, nanophotonics, and nanoelectronics
Interfacing porous silicon with biomolecules
Porous silicon biosensor for the detection of auto-immune diseases
Control over wettability via surface modification of porous gradients
Spark plasma sintering of silver nanopowder
Effects of surfactants on the formation of microdroplets in the flow focusing microfluidic device
Mechanisms of formation of nanostructures with atomic force microscopy
Superhydrophobic and superhydrophilic surfaces with MoO[subscript x] submicron structures
Surface acoustic wave device-based wireless passive microvalve for microfluidic applications
Effect of various artificial surfaces on the colonization and viability of E. coli and S. aureus
Thermal analysis of cell electro-rotation chip
Biological applications of microscope profiler
Development of a blood extraction device for a miniature SMBG system
A systematic approach to fabricate high aspect ratio silicon micro-needles for transdermal drug delivery
Ultra-small volume interdigital sensors for the measurement of human breast milk
Design of painless microneedle for blood extraction system
Low cost optical particle detection for lab-on-chip systems based on DVD technology

Novel electromagnetic micropump
Induced movement of the magnetic beads and DNA-based dumbbell in a micro fluidic channel
Bioimprint replication of single cells on a biochip
Preparation of two-directional gradient surfaces for the analysis of cell-surface interactions
Characterization of flows in micro contractions using micro-PIV and CFD to study the protein aggregation process
Micro-patterning of polymer-based optical oxygen sensors for lab-on-chip applications
Microfluidic device for controlled dilution and sorting of droplets by electrokinetic driving forces
Design and fabrication of polymer microfluidic chip for ESI-MS
Neural network prediction of protein adsorption
Signal compression in biological sensory systems: information theoretic performance limits
Nanosize particle movement in time-modulated nonuniform electric fields: a Fourier-Bessel series model

Finite element modelling of SAW correlator

Estimation of atomic hydrophobicities using molecular dynamics simulation of peptides

Feature extraction of performance variables in elite half-pipe snowboarding using body mounted inertial sensors

Improved protein-adsorption resistance of digital microfluidic device via surface coating and structure modification

Hydrogen gas sensor fabricated from polyanisidine nanofibers deposited on 36[degree] YX LiTaO[subscript 3] layered surface acoustic wave transducer

Portable multi-immunosensing lab-on-a-chip (LOC) triggered by air bladder

Enhancement of reverse transfection efficiency by combining stimulated DNA surface desorption and electroporation

Toward quality control of food using terahertz

Simple micropatterning of proteins using polyelectrolyte multilayers and microcontact printing

Effect of dispersing nano-materials into structural adhesive on the electrical and mechanical properties
