Algorithms I
Improving the SNR during color image processing while preserving the appearance of clipped pixels
Optimization model for memory bandwidth usage in x-ray image enhancement
Chaos-based image encryption scheme using Galois field for fast and secure transmission

Video Processing and Surveillance
Real-time turbulent video super-resolution using MPEG-4
Fast multi-class distance transforms for video surveillance
Real-time road traffic classification using mobile video cameras
Real-time people counting system using a single video camera

Video Compression
Fast adaptive early termination for mode selection in H.264/AVC standard based on x264 implementation
A resource constrained MPEG-7 driven rate control scheme for the H264/AVC
A high-performance parallel architecture of H.264 intra prediction for motion estimation
A real-time wavelet-based video decoder using SIMD technology

FPGA and Hardware I
A real-time bit-serial rank filter implementation using Xilinx FPGA
An implementation of a multiplierless Hough transform on an FPGA platform using hybrid-log arithmetic
Streaming warper with cubic spline interpolation for rectification of distorted images on FPGAs
Architecture-template for massively parallel statistical image processing models

FPGA and Hardware II
A memory and MHZ efficient EDMA transfer scheme for video encoding algorithms on Ti TMS320DM642
Fast approximate curve evolution

Algorithms II
Reshuffling: a fast algorithm for filtering with arbitrary kernels
Motion estimation through efficient matching of a reduced number of reliable singular points
An innovative real time system for infrared focal plan array image enhancement based on FPGA
Noise suppression in video sequences applying fuzzy vectorial directional algorithms
Optimization of tone-mapping functions in video cameras for high dynamic range images

Rapid object candidate detection using increment sign correlation
Normal map compression based on BTC and wavelet coding
VHDL implementation of wavelet packet transforms using SIMULINK tools
Generic algorithms for motion compensation and transformation
An architecture for on-the-fly correction of radial distortion using FPGA
Robust object detection based on radial reach correlation and adaptive background estimation for real-time video surveillance systems

Feature-assisted threshold selection for all-zero block detection and its application to video coding optimization in H.264

A new strategy based on adaptive mixture of Gaussians for real-time moving objects segmentation

Improved tracking by decoupling camera and target motion
