Energy Harvesting and Scavenging I
Mission performance of a solar- and microwave-powered aircraft
Stiffness nonlinearity as a means for resonance frequency tuning and enhancing mechanical robustness of vibration power harvesters
Micro-solenoid electromagnetic power harvesting for vibrating systems
Vibration energy harvesters with non-linear compliance
Energy Harvesting and Scavenging II
Ambient energy harvesting using ferroelectric materials
Energy management of multi-component power harvesting systems
Power conditioning for energy harvesting
Effect of bias conditions on the optimal energy harvesting using magnetostrictive materials
Energy Harvesting and Scavenging III
Performance comparison of implantable piezoelectric energy harvesters
An investigation into active piezoelectric nanocomposites for distributed energy harvesting
Piezoelectric energy harvesting from an L-shaped beam-mass structure
Advanced Materials and Structures
Vibroacoustics and wave propagation of novel chiral honeycombs
Characterization of porous substrates for biochemical energy conversion devices
A variable transverse stiffness sandwich structure using fluidic flexible matrix composites (F$^2$MC)
Automotive and Transportation Systems
Development of adaptive helicopter seat systems for air crew vibration mitigation
Application of orthogonal eigenstructure control to flight control design
Geometric optimization of controllable magnetorheological shock absorber for commercial passenger vehicle
Power harvesting for railroad track health monitoring using piezoelectric and inductive devices
SMAs Integrated Systems I
Multifunctional SMA-based smart inhaler system for improved aerosol drug delivery: design and fabrication
Dynamics and control of buckling type devices using SMA wire integrated beam
SMAs Integrated Systems II
Experimental investigation and numerical evaluation of an innovative shape memory alloy damper
Characterization of Ni$_{19.5}$Ti$_{50.5}$Pd$_{25}$Pt$_{5}$ high-temperature shape memory alloy springs and their potential applications in aeronautics
Testing of SMA-enabled active chevron prototypes under representative flow conditions
Smart Materials and Structures Optimization
Optimization and implementation of the smart joint actuator
Topology optimization of a plate coupled with acoustic cavity
Turbomachinery blades damping thanks to optimized shunted piezoelectric circuits

Modeling, Simulation, and Design of Controlled Systems I

3 Active optimal control of SSI system based on the finite element model of SSI system and shaking table test study

Applicability of AMD controller based on the fixed-base structure to control SSI system

Piezo shunt power flow optimization for composite beam stabilization

Two-step recursive method for dynamic response computation based on principle of minimum transformed energy

Smart Materials and Structures Optimization II

Sensitivity enhancement for damage detection in linear systems using optimal feedback auxiliary signals and system augmentation

Sensitivity based performance evaluation and reliability assessment of adaptive systems

MR Fluids Integrated Systems

Temperature sensitive stability of feedback controllers for MR dampers

Design and modeling of a mixed mode magnetorheological (MR) fluid mount

A new magnetorheological fluid-elastomer vibration isolator

Semi-active control of torsionally responsive structures

Development and testing of a magnetorheological actuator for an assistive knee brace

Biology Inspired Systems

Application of macrofibre composite in driving a tail of a biomimetic fish

Insect-inspired wing actuation structures based on ring-type resonators

Passive self repairing and active self sensing in multifunctional polymer composites

Civil Systems

Seismic retrofitting of bridge columns using shape memory alloys

Integrated Systems in Bionics and Nature-Inspired Technologies

Bio-inspired shape memory alloy actuated hexapod robot

Flapping performance and simulation of an insect-mimicking flapper actuated by a compressed unimorph piezoelectric composite actuator

An aeroelastic analysis of a flexible flapping wing using modified strip theory

Numerical analyses of stabilization and control for flopping-wing flight

Integration of Active/Passive Materials and Devices into Integrated Systems I

Membrane reflectors with variable area electrostatic actuation for loser beam guidance

Integration, control, and applications of multifunctional linear actuators

Robust vibration suppression of an adaptive circular composite plate for satellite thrust vector control

Integration of Active/passive Materials and Devices into Integrated Systems II

Rectifier-less piezoelectric micro power generator

Performance characteristics of a high frequency jetting dispenser featuring piezoelectric actuator

A blended polymer electret-based micro-electronic power generator
Piezo-electric control of nonlinear modal interaction in stiffened structures
Active/Semi-active/Passive Vibration Control
Experimental assessment of negative impedance shunts for vibration suppression on a beam
Several topics from active vibration control technique using piezoelectric films
Active damping control of micromachined devices in a low atmospheric pressure environment
Frequency response analysis of vibration system with parametric excitation of damping coefficient
Recent studies of electronic tuning of out of plane stiffness and dissipation of piezoelectric polymer membranes
Aircraft and MAV/UAV Systems
Investigation of an energy harvesting small unmanned air vehicle
Vibration energy harvesting for unmanned aerial vehicles
Analysis of bat wings for morphing
Modeling, Analysis, and Design of Structural Sensing and Actuation in Integrated Systems
Behavior of thin lightweight structures under propagating waves
Design of dual-stage actuation system for high precision optical manufacturing
Morphing Structures and Aircrafts
Bistable mechanisms for morphing rotors
Shape control of a morphing structure (rotor blade) using a shape memory alloy actuator system
Prediction of aircraft dynamics with shape changing wings
Flexible Robotic Systems
Vibration suppression of a flexible manipulator using self-tuning optimal control and LIPCA
Numerical analysis of deformation of a beam with thin piezoelectric actuators partially debonded and buckling
Poster Session
BATMAV: a biologically inspired micro-air vehicle for flapping flight: kinematic modeling
Analysis of the dynamics of the vibratory tabular valve
Analysis dynamics of piezoelectric optical scanner with periodical microstructure
Limit of feedback gains of collocated sensor and actuator pairs for beams
A new optimal vibration control system for two connection structures
Flexible multisensors for robotics
Experimental evaluation of a flapping-wing aerodynamic model for MAV applications
Experimental and analytical investigation on innovative hybrid shape memory alloys dampers for structural control
Self-optimising piezoelectric damping
Design and characterisation of micro-diaphragm for low power drug delivery applications
Passive and active data porting to composite integrated optical fibers via integrated optics
