Nearly linear time approximation schemes for Euclidean TSP and other geometric problems
Differential greedy for the 0-1 equicut problem
Gradient-constrained minimal Steiner trees
The Steiner tree problem for terminals on the boundary of a rectilinear polygon
Using Hadwiger numbers in network design
Reducing the graphical Steiner problem with a sensitivity test
A frequency assignment problem in cellular phone networks
An optimal greedy algorithm for wavelength allocation in directed tree networks
A GRASP algorithm for the single source uncapacitated minimum concave-cost network flow problem
Approximation results for the optimum cost chromatic partition problem
Approximating dense cases of covering problems
Connected facility location problems
Constrained spanning tree problems: Approximate methods and parallel computation
Star, grid, ring topologies in facility location & network design
Network improvement problems
Improved results on service-constrained network design problems
A greedy randomized adaptive search procedure for the multitarget multisensor tracking problem
A generalized threshold algorithm for the shortest path problem with time windows
A case study of de-randomization methods for combinatorial approximation algorithms
A chunking based genetic algorithm for the Steiner tree problem in graphs
A new exact algorithm for rectilinear Steiner trees
A scalable TWDM lightwave network based on generalized de Bruijn digraph
A new model of generalized Steiner trees and 3-coordinate systems
A model for network design
Nonlinear and mixed-integer optimization in chemical process network systems
Shortest networks on spheres
