Foreword p. v
Preface p. vii
Characterization and description of basic semialgebraic sets p. 1
Constructive approaches to representation theorems in finitely generated real algebras p. 13
Combinatorial characterizations of algebraic sets p. 23
Lower bounds and real algebraic geometry p. 35
The Viro method applied with quadratic transforms p. 55
On the number of connected components of the relative closure of a semi-Pfaffian family p. 65

How to show a set is not algebraic p. 77
Minimizing polynomial functions p. 83
Patterns of dependence among powers of polynomials p. 101
Efficient algorithms based on critical points method p. 123
Enumerative real algebraic geometry p. 139
Combinatorial roadmaps in configuration spaces of simple planar polygons p. 181
Visibility computations: From discrete algorithms to real algebraic geometry p. 207
