Robust design of dynamic routing networks
Graph searching, path-width, tree-width and related problems (A survey)
On residual connectedness network reliability
Survivable fiber network design
Decomposable probabilistic influence diagrams
Bounding network parameters by approximating graphs
The optimal multiterminal cut problem
Polyhedral approaches to network survivability
A survey on double loop networks
Quantitative reliability analysis of redundant multistage interconnection networks
An axiomatic characterization of the reliability polynomial
Fault-tolerant VLSI architectures based on de Bruijn graphs (Galileo in the mid nineties)
The use of binomial moments for bounding network reliability
Boolean decomposition schemes and the complexity of reliability computations
On dynamic full access in multistage interconnection networks
Algebraic methods for bounding network reliability
