Importance of Metal-Ligand Bond Energies in Organometallic Chemistry: An Overview

Periodic Trends in Transition Metal Hydrogen, Carbon, and Nitrogen Bonds
Organometallic Reaction Energetics from Product Kinetic Energy Release Distributions
Methods for Determining Metal-Ligand and Metal-Metal Bond Energies Using Fourier Transform Mass Spectrometry
Gas-Phase Thermochemistry of Organometallic and Coordination Complex Ions
Ionization Energy-Bond Energy Relationships in Organometallic Chemistry
Thermodynamics and Kinetics of Transition Metal-Alkyl Homolytic Bond Dissociation Processes
Cage Pair Intermediates and Activation Parameters
Thermodynamic and Kinetic Studies of Binding Nitrogen and Hydrogen to Complexes of Chromium, Molybdenum, and Tungsten
Thermodynamic Studies of the Hydrogenation and Reductive Coupling of Carbon Monoxide by Rhodium(II) Porphyrins
Metal and Ancillary Coordination Effects on Organolanthanide-Ligand Bond Enthalpies: Implications for Bonding and Reaction Patterns
Novel Extensions of the Electrostatic Covalent Approach and Calorimetric Measurements to Organometallic Systems
Metal-Ligand and Metal-Hydrogen Bond Dissociation Energies in Cp
Mn(CO)2L and Cr(CO)5(olefin) Complexes
Metal-Carbon and Metal-Hydrogen Bond Dissociation Enthalpies from Classical and Nonclassical Calorimetric Studies
Adsorbate-Induced Restructuring of Surfaces: Surface Thermodynamic Puzzle
Acid Sites on Chemically Modified Molybdenum Surfaces
Absolute Electronegativity, Hardness, and Bond Energies
Gas-Phase Chemistry of First-Row Transition Metal Ions with Nitrogen-Containing Compounds: Theoretical and Experimental Investigations
Periodic Trends in the Bond Energies of Transition Metal Complexes: Density Functional Theory
