

Preface
Introduction to Chemical Engineering Principles
Interface Between Chemistry and Chemical Engineering
What's in This Book
Mass Balances
Energy Balances
Heat Transfer in Industrial Chemical Processes
Fluid Flow and Chemical Processing
Mass Transfer in Separation, Purification, and Heterogeneous Systems
Examples of Mass Transfer
Chemical Engineering Kinetics, Process Control, and Engineering Economics
Basic Steps for Scaling Up a Process Design
The Principles of Fluid Flow, Heat Transfer, and Mass Transfer
Chemical Engineering Principles Applied to New Technologies
Applied Thermodynamics
Terms
Temperature and Heat
Definition of Work
Conservation of Energy--The First Law of Thermodynamics
The Second Law of Thermodynamics--The Limits of Efficiency
Gibbs Free Energy, Chemical Potential, Fugacity, and Activity
Applied Phase Equilibrium and the Distribution Coefficient
Activity Coefficients
Fluid Flow
Fluid Statics
Buoyancy
Fluid Dynamics--The Character of Flowing Fluids
Flow and the First Law of Thermodynamics--Bernoulli's Equation
Friction Losses in Fluid Flow
Types of Pumps and Their Uses
Flow Around Submerged Objects--Calculating a Drag Force
Non-Newtonian Fluid Flow
Mixing Fluids
Flow Through Packed Beds, Porosity, and Sphericity
Heat Transfer
Conduction
Convection--Heat Transfer with Motion
Radiation--Heat Transfer through a Vacuum
Steady-State Heat Conduction-- q Steady with Time
Steady-State Heat Conduction with a Heat Source--Heated Wires, Chemical Reactors,
and Phase Changes
Unsteady-State Heat Conduction

Convective Heat Transfer--Forced and Free
Dimensionless Number for Comparing Conduction and Convection--The Nusselt Number
The Overall Heat Transfer Coefficient, U-Combining Conductive and Convective Heat Transfer Effects
Heat Transfer with Flow around Objects
Radiative Heat Transfer
How an Object's Shape Affects Radiation
An Introduction to Heat Exchangers
Mass Transfer
Steady-State Molecular Diffusion
Unsteady-State Molecular Diffusion--Time Dependence
Mass Transfer at a Phase Boundary
Mass Transfer for Different Geometries
Equilibrium Stage Operations, the Ideal Stage, and Phase Equilibria
Mechanical Separation Processes
Applied Reaction Kinetics and Reactor Design
A Review of Chemical Kinetics and Chemical Equilibrium
Chemical Reaction Kinetics Categories
Chemical Reactor Design
Process Control and Data Acquisition
Control Applications and Types of Systems
Types of Control
Basics of Control Systems
Process Control Equipment
Process Dynamics--Determining Control Response Mathematically
Process Dynamics Design Methods
Additional and Advanced Control Methods
Data Acquisition by Computer
Engineering Economics and Process Design
Time Value of Money
Depreciation and Salvage Value: Depreciation Methods and Sinking Funds
Economic Alternatives
Guidelines for Comparing Investment Alternatives
Cost Indexes--Estimating Process Costs from Existing Operations
Equipment Cost--Capacity and Scaling Factors, Six-Tenths Rule
Capital Investment Estimating Techniques
Pricing Chemical Products
Proce
