Introduction to Aggregation Phenomena in Food Colloids

The Fractal Nature of Fat Crystal Networks

Kinetics of Partial Coalescence in Oil-in-Water Emulsions

On the Physics of Shear-induced Aggregation in Concentrated Food Emulsions

Denaturation of Whey Proteins Studied by Thermal Analysis and Chromatography

Milk Clotting Time as a Function of Volume Fraction of Casein Micelles

Calcium Induced Flocculation of Emulsions Containing Adsorbed Phosvitin or [Beta]-Casein

Interactions and Contributions of Stabilizers and Emulsifiers to Development of Structure in Ice-cream

Protein-Polysaccharide Interactions in Food Colloids

Thermodynamic Incompatibility of Food Macromolecules

Mixed Biopolymers in Food Systems: Determination of Osmotic Pressure

Polysaccharide-Surfactant Systems: Interactions, Phase Diagrams, and Novel Gels

Physical Properties of Starch Products: Structure and Function

A Rheological Description of Amylose-Amylopectin Mixtures

Stringiness of Aqueous Starch Pastes

Evidence for Protein-Polysaccharide Complex Formation as a Result of Dry-heating of Mixtures

A Statistical Model of the Adsorption of Protein-Polysaccharide Complexes

The Structure of Casein Micelles

Primary and Secondary Structures of Caseins

Time Dependent Fracture Behaviour of Foods

Mechanical and Fracture Properties of Fruit and Vegetables

Mouthfeel of Foods

Influence of Soluble Polymers on the Elasticity of Concentrated Dispersions of Deformable Food Microgel Particles

Creaming Behaviour of Dispersed Particles in Dilute Xanthan Solutions

NMR Micro-imaging Studies of Water Diffusivity in Saturated Microporous Systems

Crystallization in Simple Paraffins and Monoacid Saturated Triacylglycerols Dispersed in Water

Effects of Plasticizers on the Fracture Behaviour of Wheat Starch

Rheology of the Gel Protein Fraction of Wheat Flour

Viscosity of Milk and its Concentrates

Mechanical Properties of Concentrated Starch Systems during Heating, Cooling, and Storage

Relevance of Biaxial Strain Hardening to the Gas Retention of Dough

Studies of Water-in-Oil-in-Water (W/O/W) Multiple Emulsions: Stabilization and Controlled Nutrient Release

Modelling Small Intestine Emulsions: Effects of Soluble Non-starch Polysaccharides

Determination of Particle Size Distribution in Tomato Concentrate

Dynamic Surface Properties in Relation to Dispersion Stability
