

Introduction	p. 3
Defining soil quality	p. 15
Monitoring and evaluating soil quality	p. 23
Managing soil quality	p. 50
Concluding remarks	p. 63
Microbial biomass and numbers	p. 73
Estimating soil microbial biomass	p. 73
Microbial biomass measurements by fumigation-extraction	p. 77
Substrate-induced respiration	p. 84
Enumeration and biovolume determination of microbial cells	p. 93
Soil microbial activity	p. 114
Estimating soil microbial activity	p. 114
Soil respiration	p. 117
Soil nitrogen mineralization	p. 127
Nitrification in soil	p. 136
Thymidine and leucine incorporation to assess bacterial growth rate	p. 142
N ₂ O emissions and denitrification from soil	p. 150
Enzyme activity profiles and soil quality	p. 158
Soil microbial diversity and community composition	p. 183
Estimating soil microbial diversity and community composition	p. 183
Soil microbial community fingerprinting based on total community DNA or RNA	p. 187
Phospholipid fatty acid (PLFA) analyses	p. 204
Substrate utilization in biolog plates for analysis of CLPP	p. 212
Plant-microbe interactions and soil quality	p. 228
Microbial ecology of the rhizosphere	p. 228
Nodulating symbiotic bacteria and soil quality	p. 231
Contribution of arbuscular mycorrhiza to soil quality and terrestrial ecotoxicology	p. 248
Concepts and methods to assess the phytosanitary quality of soils	p. 257
Free-living plant-beneficial microorganisms and soil quality	p. 270
Census of microbiological methods for soil quality	p. 296
