Where should mixing go? A biased view p. 1

Direct measurement of the turbulent macro-scales in a stirred vessel by two-point LDA p. 3

The use of computational fluid dynamics (CFD) to estimate mixing times in a stirred tank p. 15

Flow studies in stirred tanks by positron emission particle tracking (PEPT) p. 23

Process control and CFD validation of a NIMIX mixer using a vision system p. 35

Circulation time measurements with miniature radio frequency identification devices p. 47

Study of wear and tear of axial flow impellers p. 59

On the distribution of turbulence energy dissipation in stirred vessels p. 69

CFD study of homogenisation with dual Rushton turbines - comparison with experimental results p. 81

What affects the yield of a chemical reaction in a lamellar structure? p. 93

Investigation of the characteristics of chaotic flow domains with oscillating boundaries p. 105

Assessing the three dimensional, transient, non-Newtonian, non isothermal simulation of polymer compounding in an internal mixer p. 117

The modelling of imperfect mixing in buffer tanks p. 127

Image-reconstruction 3-D visual modelling of stirred vessel mixing for an inclined-blade impeller p. 135

Scalar mixing measurements in a continuously operated stirred tank agitated with a Rushton turbine using an LIF line scan technique p. 147

Investigating liquid-liquid mixing by electrical capacitance tomography p. 159

Processing of emulsions using a high velocity jet device p. 165

The influence of fat crystals on the equilibrium drop size and coalescence rate in agitated sunflower oil/water dispersions p. 177

Power input and mean flow changes in two-phase agitation p. 187

Gas-liquid mass-transfer: surface aeration in stirred vessels with dual impellers p. 199

Sound measurement as a non-intrusive method of monitoring a gas-liquid dispersion p. 217

Neural network modelling of surface aeration in mechanically agitated bioreactors p. 227

Bubble driven mixing in a density stratified environment p. 235

Energy-saving in gas-liquid mixing using the NS-impeller p. 245

Shape effects on impeller power characteristic for mixing and gassing power law fluids p. 253

Multi-impeller gas-liquid contactors design based on single-impeller data p. 263

The transition from homogeneous to heterogeneous flow in a gassed, stirred vessel: a preliminary study p. 271

Macro-mixing and micro-organisms: partial segregation inside a triple-impeller bioreactor p. 283

A non-intrusive method for flow pattern detection in gas-liquid reactors - gas supply line pressure fluctuation measurements p. 295

Liquid and solid particle mean flow and turbulence levels in a stirred vessel with low impeller clearance p. 305
Diffusion limited mixing and reaction in heterogeneous catalysis of initially segregated species p. 317
Determination of just-suspension speed for Rushton turbine using tank bottom pressure measurements p. 325
On the fraction of suspended solids in three-phase stirred tanks p. 337
Mixing of solid waste on incinerator travelling grates p. 349
Modelling of flow field in the mini-flocculator p. 361
Dimensionless flow characteristics in mixed suspension obtained by LDA/PDA p. 373
Compartment mixing model for anaerobic digesters with central draft-tubes p. 383
Mixing, reaction and precipitation: semibatch barium sulphate precipitation p. 395
Minimum conditions for liquid-liquid mixing in continuous flow, pump-mix, agitated tanks p. 421
Index p. 433
