Noise evaluation of emerging television systems p. 1
Correlation between objective and subjective measurements for video compressed systems p. 7
Picture quality issues in digital video compression p. 13
Patterns for all formats p. 19
A measurement system for the test of DVB receivers p. 25
COFDM for digital ATV terrestrial distribution over 6 MHz channels p. 29
High bit rate data transmission within buildings for wireless digital cameras p. 35
Design concepts for digital television transmitters p. 41
ID logic SW - The key to an intelligent short-wave receiver p. 47
A new detector for ghosted VIF signals p. 53
Digital audio broadcasting - The future of radio p. 57
DAB: Going live - Implementing a national single frequency network p. 62
DAB datacasting in the Netherlands p. 67
Digital audio broadcasting receiver development p. 71
A consumer orientated approach towards digital audio broadcast via satellite p. 76
Terrestrial transmission of DTVB signals - The European specification p. 79
Coverage planning for digital terrestrial television p. 85
Feasibility of digital terrestrial television broadcasting p. 94
Differential amplitude phase shift keying (DAPSK) - A new modulation method for DTVB p. 102
The development of an upgraded SPECTRE modem for UK based field trials and tests p. 109
A migration path from multi-program MPEG-2 to HDTV p. 117
CD3-OFDM: A new channel estimation method to improve the spectrum efficiency in digital terrestrial television systems p. 122
Dial-up audio for outside broadcasts and remote events p. 129
MPEG audio layer II: A generic coding standard for two and multichannel sound for DVB, p. 136
DAB and computer multimedia p. 145
Loudness uniformity and dynamic range control for digital multichannel audio broadcasting p. 145
The effect of low bit-rate coding upon impaired audio material p. 151
Audio coding for TV and multimedia p. 159
Commonalities and peculiarities of DVB-S, DVB-C and DVB-SMATV systems (COMMs and PECs of DVB systems) p. 175
Building direct-to-home television and entertainment networks for Europe using the new digital video broadcast standards p. 178
Design and performance of a variable-rate QAM modem for digital cable television p. 184
CA-TV goes digital - Results from DVB-experiments in Dutch CATV-systems p. 189
Transmission of digital signals over MMDS p. 189
A flexible and modular approach for transmission of digital TV and for interactive services p. 195
A digital audio production system p. 202
Desktop video post-production; The reality of its use in the UK p. 208
The BBC radio digital project - A quest for programme production efficiency p. 213
Technology serving the broadcaster

TV listings databases and the multi-media interface for electronic programme guides (EPGs)

Motion estimation and image warping for video compression

Study of the subjective performance of a range of MPEG-2 encoders

Improved motion estimation for MPEG coding within the RACE 'COUGAR' project

Spatial prediction in scalable video coding

Neural network technology for image compression

Video quality of service in broadband networks

Performance of an ATM network with multimedia traffic - A simulation study

Broadcast quality video over SDH networks; Eradicating sub carrier corruption due to pointers

Reuters experience of vision over SDH or how comms and television got together and stepped into the future

Building blocks for super highways

New control solutions for existing problems

Computers and TV station automation - A user friendly approach

Constructing a media server architecture for the needs of the video industry

Media management and control of video disks

Using hybrid fibre-coax networks for demand and inter-active services

Video and audio on demand - Today's CATV networks on their way to interactive communications networks

A user interface for multichannel television

ADSL/HDSL technologies and applications in VOD and multimedia services

Live TV news reporting from every home

Virtual economics - Calculating the I-way

Getting the job done. How hybrid systems can increase your studio's productivity

Programme production and the 16:9 action plan: An assessment

Digital compression and the International TV marketplace

Managed broadcast distribution networks

Understanding how interactive television set-top box works... and what it will mean to the customer

Closing the loop - Payment on demand for interactive services

Consumer friendly delivery of multimedia digital services

Aspects of enhanced teletext

The emergence of digital compression

Evaluating public policy options for implementing digital terrestrial television: The challenges of transition

Digital terrestrial television - Commercial issues of multiplex operation

A systems approach to the digital television business

The development of a subscriber management system for the digital age

Video on demand - Competing technologies and services

Introduction of digital television and radio services in the Arab world
A digital editing suite in an analogue environment p. 453
Practical implementation of the WD/TD optical network in a broadcast station p. 458
High capacity digital switched fiber optic networks p. 464
Converting the BBC's analogue-based broadcasting network to the digital telecommunications domain p. 470
Optical broadband network for TV contribution in Zagreb-Croatia p. 476
A magneto-optical video disk recorder for 625/50 digital component signal p. 482
DVCPRO: Playing to the strengths of tape p. 488
Approaching real-time: Digital disk recorder and workstation interchange of video streams p. 494
Disks, broadcasting, automation and the demise of tape p. 500
Operational experiences of the digital video cache and its role in the development of the television local area network p. 505
Multi-channel broadcasting to the European market p. 512
Satellite digital TV reception through domestic TV networks (SMATV) p. 517
Provision of uplink and transmission facilities for Australia's digital satellite subscription television service p. 524
Kloning the film image for digital high resolution systems p. 530
Aurasoft, the first truly natural and controllable softlight p. 537
The 4:2:2 profile of MPEG-2 for use in a studio environment p. 542
A new algorithm for standards conversion using generalized block matching p. 548
To and from the wide screen: Aspect ratio conversion p. 554
Shared use of a satellite transponder by analog and digital carriers p. 559
Simulcast: The EUTELSAT proposal for a smooth transition from analogue to digital TV p. 564
Practical satellite news gathering using compressed video p. 570
Broadcast satellite networking - A model plan p. 576
Teleport London International: The new alternative p. 581
