Development of long life and large capacity VRLA batteries for telecommunication
infrastructure

A catalyst in a VRLA cell: The affect on cell life and tafel character

Development of reliable and long life VRLA batteries

Design of a 600W telecom grade rectifier module with electrolytics reduced to one
piece, planar technology and integrated heatsink concept

The theory of symmetrical components helps solving problems in polyphase rectifiers

The effects of environmental contaminants on electronic power supplies

New DC power systems for BT

Thermal management of power system design by computational simulation

1950-2001: More than one-half century of learning how to live with each new generation
of telecommunication standby batteries

The development of a new battery range for telecommunications applications

The non-linear low-frequency impedance of lead/acid batteries during discharge,
charge and float operation

Copper losses and power density of power transformer technologies

Analysis of dynamic characteristics for the partially resonant active filter with the
DSP

A special bi-directional step-up and inverting step up/down DC/DC converter

Emerging cooling requirements and systems in telecommunications spaces

Cooling of telecommunications enclosures in tropical and desert environments

Designing an alternative to conventional room cooling

The operation of VRLA monoblocs with an on/off float charge regime

Recharge of valve-regulated batteries at elevated temperatures

Using float charging current measurements to prevent thermal runaway on VRLA
batteries

DSP controlled buck/boost power factor correction for telephony rectifiers

Designing a zero voltage transition boost converter for power factor corrected
modular telecom rectifiers

Experimental analysis of a 5kW wide input voltage range three-phase buck+boost power
factor corrector

A history of the use of internal combustion engine driven generating sets in the UK
telecommunications network 1900-2000

Active filter for a microturbine

VSIG - Variable speed integrated generating set for telecommunication application

A novel technique for modelling the state of charge of lithium ion batteries using
artificial neural networks

Ni-Cd field experience confirms low maintenance and their operating characteristics
in telecom applications

High power lithium ion batteries for a changing telecommunications world

Low voltage DC-to-DC converter with wide input to output voltage ratio

An isolated DC-DC converter with +/-220V balanced outputs for telecom systems

Two-dimensional finite element simulation and stress analysis of a full bridge DC-DC
power converter
Predicting and improving power reliability p. 221
Applying predictive maintenance to power quality p. 229
On the development of a long life post seal for stationary batteries p. 238
Hydrogen sulphide in VRLA cells p. 245
A new approach to the application of fibre structure electrodes in alkaline batteries for telecommunication p. 252
Integrated power quality compensator with three-level PWM AC/DC converter p. 259
Modelling and control of interleaved parallel converters with non-identical parameters p. 266
A new experimental approach in measuring open loop frequency response of isolated DC/DC converters p. 274
Considerations for the configuration and arrangement of valve regulated monobloc batteries in enclosures- Part II p. 279
Modular remote powering as an alternative for an easy to build high speed access network p. 287
Practical case study of remote and local powering system for hybrid fibre-coaxial (HFC) networks p. 294
Determination of the state-of-health of VRLA batteries by means of noise measurements p. 301
A single integrated circuit approach to real capacity estimation and life management of VRLA batteries p. 307
Creating an effective, electronic field test programm for stationary batteries p. 313
Digital PLL with controllable frequency response time and overshoot p. 321
Applications guidelines for glue power when using multiple, DC/DC converter modules p. 326
Minimization of conduction losses in the boost converter with galvanic isolation p. 334
New power system topology for improved availability of GSM radio networks p. 341
Evaluation method for high-reliability air conditioning power supplies p. 345
Internet data centres (IDC): Design considerations for mission critical power system performance p. 353
An investigation into the effect of abuse charging and thermal runaway in VRLA batteries p. 361
Life performance and failure mode analysis of improved, large VRLA batteries used in a 20kW load-leveling installation p. 369
A new AC-DC PWM full-bridge converter with integrated power factor correction p. 376
A new low-frequency state model of a three-phase three-switch three-level fixed-frequency PWM rectifier p. 384
Sliding mode control of neutral point clamped PWM rectifier p. 392
Maintainability: The missing piece of the availability puzzle p. 399
Reliability considerations for data centres power architectures p. 406
Power stability improvement of power utility grid using a new advanced static var compensator p. 412
Measurement of impedance and conductance: Myth and reality tested in the field p. 416
Transient voltage surge propagation in DC power plants p. 425
Results of discrete frequency immittance spectroscopy (DFIS) measurements of lead acid batteries

Some advances in control for telecommunications DC power systems

Evaluation of a delta-connection of three single-phase unity power factor rectifier modules ([Delta]-rectifier) in comparison to a direct three-phase rectifier realization. Part II - Component stress evaluation, efficiency, control

A new zero-voltage-switching half-bridge converter using saturable inductor of the telecommunications rectifier system

Modelling of grounding systems for better protection of communication installations against effects from electric power system and lightning

Construction of lightning observing system and an example of its application

Power surge protection for telecommunications facilities

Reducing DC power system operating costs through supervisory control software changes

A network element management solution

Why have monitoring?

Analysis and design of the two-amplitude actively clamped resonant DC-link inverter

A series active power filter for harmonic voltage suppression

A new digital controlled inverter system with static switch

Contemporary architectures for power systems considering future trends

Evolution of the telecom powering strategy: Moving to a cost effective and reliable solution using remote powering

Comparison of power supplies for residential telephony systems

Selection of telecom batteries

Soft-sensor approach in characterisation of VRLA batteries

Overview of the revised IEC 60896-2-1 standard for the test of VRLA batteries for stationary service - An update

The advanced power plant integrated maintenance control system (ALICE)

Ultra-long duration backup for telecommunications applications using zinc/air regenerative fuel cells

Energy management systems in the new datacom world

Solar power for radio base station (RBS) sites applications including system dimensioning, cell planning and operation

Development of free cooling for ISP and 3G applications

A non-contact power-supply card powered by solar cells for mobile communication

Field experiences with VRLA-Gel-Batteries in stationary applications over a period of more than 20 years

POWER Hub: Networked monitoring and maintenance

Assessing single fault immunity in an operating switching and transport system

Battery-free continuous power system for distributed telecom power plants

Testing of engine-generators for outside plant applications

Hybrid power-supply system composed of photovoltaic and fuel-cell systems

EMC of power suppliers for telecommunications by design - A computational approach
Operation reliability of on-board DC/DC-modules exposed to high magnitude electromagnetic fields p. 641

The importance of new EMC standard, EN 300 386-2 for telecom power world p. 648

A field of a Vanadium energy storage system p. 652

Telecom back-up power systems based upon PEM regenerative fuel cell technology p. 657

Long-life nickel-metal hydride batteries as a backup power supply for telecommunications system - Prolongation of cell life and effect of thermal management p. 662

Solid oxide fuel cell products for telecomm applications p. 667

Lithium-metal-polymer battery: Long-life validation field tests, life prediction and product evolution p. 671

Fuel cell power systems for telecommunications p. 677
