Evaluation of test methods for determining the resistance of concrete to chloride-ion penetration
Sustainable development and durability of self-compacting concretes
Macro- and micro-cell corrosion of steel bars in cracked concrete made with various cements
The use of beneficiated fly ash as a component of cement in concrete
Development of lightweight concrete containing high volumes of fly ash, bottom ash, and waste fines from stone quarries
The effects of blended cements on concrete porosity, chloride permeability, and resistivity
Fast-track concrete construction using cement replacement materials
Strength development of ternary blended cement with high-calcium fly ash and amorphous silica
Use of fluidized bed combustion ash as raw feed in the manufacture of calcium sulfoaluminate cements
Influence of different curing conditions on strength development of high-strength concrete using fly ash
Concrete with fly ash and influence of alkalinity on strength, leaching and freezing and thawing of fly ash cement stabilisations
The use of high-range water-reducers in concrete containing fly ash and ground, granulated blast-furnace slag
The pore structure and autogenous shrinkage of high-performance concrete with ternary binders
Evaluation of ASR resistance of fly ash-slag combinations using the modified ASTM C 1260 Test method
Long-term performance of concrete incorporating ground granulated blast furnace slag
Strength and corrosion protection of silica fume concrete containing fly ash or calcium nitrite inhibitor or both
Reaction models for alkali-activated slags
Evaluation of zeolite-bearing tuffs as pozzolanic addition for blended cements
Efficiency of inert mineral admixtures in mortars 335
Activation of fly ashes: a general view
Influence of quality of powder on rheology of high-fluidity concrete
High calcium coal fly ash as raw material for synthesizing new low-energy cements
The role of fine supplementary binder in high performance fiber reinforced cementitious composites
Compressive strength of mortars due to pozzolanic reaction of fly ash
Influence of silica fume on the rheology of cementitious paste
Use of municipal solid waste incineration (MSWI) fly ash for manufacturing ecological and energy saving cements
Environment-friendly block made from steel slag
Chloride ingress into concrete in saturated and cyclic wetting and drying environments
The influence of slag and fly ash on the carbonation of concrete
Optimization of silica fume, fly ash and amorphous nano-silica in superplasticized high-performance concrete

High-strength self-compacting concrete with fly ash: development and utilization

Properties of flowable self-compacting slurry using quarry by-products and ponded CCPs

Compressive strength and leachate characteristics of new green CLSM with eco-cement and melted slag from municipal solid waste

Effects of replacement ratio and curing condition on properties of concrete incorporating blast-furnace slag

Environmental life cycle assessment of concrete containing fly ash

Construction and performance of high-volume fly ash concrete roads in India

Anti-solidification technology for fine aggregate from blast furnace slag

Study of the compositions and properties of secondary mineral resources for developing the heat-insulating concrete not containing Portland cement

Durability of concretes containing supplementary cementing materials under hot and aggressive environment

Performance of a new supplementary cementitious material in combination with chemical admixtures

Evaluation of the sulphuric acid resistance of contemporary concretes

Effect of gypsum content in cement on autogenous shrinkage of Portland blast-furnace slag cement concrete

Influence of blast furnace slag on durability of high-strength concrete

Ground granulated blast-furnace slag based cementing materials activated with alkaline waste water

Influence of co-combustion on the quality of coal fly ash

Mechanical properties and durability of high strength concrete containing rice husk ash

Effect of treated effluent on concrete durability

Factors affecting the autogenous shrinkage of ground granulated blast-furnace slag cement concrete

The activation of class C-, class F-fly ash and blast furnace slag using geopolymerisation

Effect of water and steam curing on long-term performance of concrete

Mercury controls on power plants: potential impacts on fly ash use in concrete

Strength development and temperature rise in high-volume fly ash and slag concretes in large experimental monoliths

Influence of calcining conditions on pozzolanic activity and reaction kinetics in paper sludge-calcium hydroxide mixes

Microcracking and chloride ion diffusion of concrete under sustained uniaxial compression

A thermogravimetric study of the pozzolanic reactions in mixtures containing fluidized catalytic cracking catalyst, fly ash, cement and water

Leaching characteristics of blended mortars containing copper slags

The role of recycled aggregates in self-compacting concrete
