Writing, Reviewing and Publishing Journal Articles
ASCE Review and Publication Process for Technical Journals
What Makes a Quality Paper?
How to Improve Writing Skills
Drainage in the Humid Areas
Environmental Impacts of Agricultural Drainage
Engineering of Controlled Drainage Systems
Optimizing Economic Returns in Drainage Design
Stochastic Analysis of Seasonal Hydraulic Conductivity
Use of Agricultural Drainage Techniques in Non-Agricultural Water Management
Stabilizing Drop Structure By Drainage Modifications
Tapping Shallow Groundwater with Horizontal Wells
Agricultural Drains and Safety of Dams
Design of Transient and Steady State Drain Spacing
Technical Aspects of Ground Water Protection
Degradation of Ground Water By Tetrachloroethylene
Wellfield Protection Program in Broward County, Florida
Case Study: Design of Groundwater Quality Monitoring Systems
Use of D-C Resistivity to Map Saline Ground Water
A Summary of Ground Water Protection Strategies in the U.S.
Principles of Ground Water Protection
Connecticut's Wellhead Protection Program
Oklahoma's Ground Water Protection Strategy
Ground Water Quantity/Quality in the U.S.
Ground Water Management In Southern Florida
Ground Water Management in Arkansas
Statistical Decision Analysis for Interception Wells
[H] and [C] As Tracers of Ground-Water Recharge
Use and Standardization of Evapotranspiration Software
Evapotranspiration Data Management in California
ETBC: Interactive Software for Blaney-Criddle Estimates of Evapotranspiration
Standard Reference Evapotranspiration Calculations: REF-ET
Economical and Statistical Based On-Farm Irrigation Scheduling
Effects of ET on Water Quality
Use of TETrans Model in Predicting ET Effects on Groundwater Quality
Predicting Water Quality as Affected by ET Using the Root Zone Water Quality Model

Water Quality Effects on Eucalyptus ET
Importance of ET on Colorado River Water Quality
ET from Ground Water
ET from Shallow Groundwater Maintained by Controlled-Drainage/Subirrigation System
Simulated Citrus Water Use from Shallow Groundwater
Influence of Irrigation on Subsurface Drainage
2-D Evaporation and Root Moisture Extraction In An FEM
Irrigation Technology Transfer in Developing Countries: Part 1
The Debate Over Modernization
Technology Transfer Lessons From a U.S. Water District
Technology Transfer For Projects In South America
Greenhouse Irrigation Technology Transfer in Spain
Irrigation Technology Transfer in Developing Countries: Part 2
Promoting Private Irrigation Development: The Irrigation Sector Program Experience in Nepal
Technology Transfer to Developing Countries
Irrigation Technology Transfer: Part 3
An Interagency Program to Improve Irrigated Agriculture
U.S. Bureau of Reclamation - New Directions in Water Management and Conservation
Use of Pilot Projects for Technology Transfer in Developing Countries
Operation of Farm Irrigation Systems
Simulating the Effects of Deficit Irrigation for Furrow Systems
Design and Maintenance Factors Affecting Application Uniformity of Low Pressure Center - Pivot Irrigation Systems
International Policies Related to Irrigation and Drainage
Holistic Approach to Irrigation Management in Developing Countries
Combined Allocation and Operation Model
Ecuador The Lower Guayas Flood Control and Drainage Project: A Case Study
Planning for Rehabilitation of I and D Systems
Rehabilitating Irrigation Systems from the 20th Century for the 21st Century
Rehabilitating Irrigation Systems with USDA Water Quality Programs
Planning for Water Conservation Through Irrigation System Modernization and Rehabilitation
Broad-Crested Weir Application on 15,000-Acre Farm
Use of Remote Sensing and Geographic Information Systems for Planning and Management of Irrigation and Drainage Systems
Ground-water Policy-making Support: USEM Optimization Modeling Plus GIS and Graphics
Irrigation and Drainage System As-Built Map Preparation Using Satellite Digital Imagery and a GIS
Role of Land Information System in Operation and Maintenance of Irrigation and Drainage Systems Bureau of Reclamation
Crop Classification and Area Estimation Using Airborne Multispectral Video/Radiometer Remote Sensing
Meteorological and Hydrological Aspects of Drought
Meteorological Aspects of Droughts
Hydrological Aspects of Droughts
A Markov Chain Approach for Analyzing Palmer Drought Index
Objective Measurement of Drought and Agricultural Response to Drought in the Water-Constrained Monsoon Climate of Tamil Nadu, India

Water Management During Drought

Operation of the Central Valley Project During California's Drought

Water Management Under Drought Conditions - An Overview of Practices by Federal Agencies

Operation of the Tennessee Valley Authority Water Control System Under Extreme Drought Conditions

Curve Numbers - Status and Development

Retention Parameter Estimates for Curve Number Runoff Procedure

Progress Report ARS/SCS Runoff Curve Number Work Group

Disturbed Lands Hydrology

Hydrologic Considerations in Mined Land Reclamation

Variations in Curve Number for a Reclaimed AML Site

Hydrogeotechnical Considerations for the Disposal of Oil Shale Solid Waste Material

Simulation of Runoff and Infiltration of Disturbed Land

Agricultural Water Quality Problems in the Eastern United States

Agricultural Impacts on Surface Water Via Ground Water

Assessing the Leaching Potential of Herbicides at the Ohio MSEA

Aldicarb Transport in the Coastal Plain of N.C.

Water Quality Implications of Encapsulated Atrazine

Agricultural Water Quality

Water Quantity and Quality for Irrigated Agriculture and Wetlands

Recycling Wastewater by Drip Irrigation

Expert System for Agricultural and Water Quality Management

Management of Agricultural Drainage Pollution Considering Regional Cooperation

Operation and Maintenance of Irrigation Systems

Gradual Development of Bores in Canal Systems

Design of Irrigation Distribution System

Case Studies of Semi-Closed Pipeline Systems For Flexible Deliveries

Stochastic Simulation and Optimization of Irrigation Canal Network Flows

Hydrologic Applications of Watershed Management

Darcy-Weisbach Roughness Coefficients for Selected Residue Materials

Calculation of Runoff from Rainfall Using "NURP" Data

Prediction of Sedimentgraph From a Small Watershed in Poland in a Changing Environment

7-Day 10-Year Low Flow Relationships for Ungauged Sites in Central Italy

Applications of GIS in Watershed Management

Linking GIS with Hydrologic Modeling
