Alumina and Bauxite Technology

Specialty Alumina Products

Hydrate Quality Improvement p. 5
Alumina Trihydrate Color Study p. 7

Chemical Products and Alumina As Result of Non-Bauxite Raw Materials Joint Waste-free p. 11

Spent Bauxite Use and Processing

Trace Element Partitioning and Bioavailability in Red Mud Synthetic Freshwater Sediment p. 19
Red Mud Product Development p. 25
Utilization of Waste Water From Alumina Production p. 31

Alumina Process Developments

New Water-Continuous Red Mud Flocculants for the Bayer Process p. 39
Research of Zinc-Removal in the Bayer Process p. 45
The Chemistry of Solid-Liquid Calcination (SLC) p. 49
Alumina Production From Diasporic Bauxites p. 55
Settler Throughput Increase at Aluminium de Grece Refinery p. 63
Precipitation Particle Size Control p. 71

Improvements of Hydrometallurgical Flowsheet in Soda-Lime Sintering Process p. 77

Bayer Process Design and Simulation

Simulations of Bayer Liquor Pipeflows Using a Rotating Cylinder Electrode p. 87
Simulation of the Bayer Process p. 95
Co-Generation--an Effective and Economic Solution to Power Instability p. 113

Silica Chemistry in the Bayer Process

The Kinetics of Desilication of Synthetic Spent Bayer Liquor Seeded with Pure Sodalite, Pure Cancrinite and Their Dimorphic Phase Mixtures p. 121
Reducing Alumina Production Costs p. 1,169

The Solubility of Sodalite and Cancrinite in Synthetic Spent Liquor and the Mechanism and Kinetics of the Sodalite to Cancrinite Phase Transformation p. 131

Aluminum Reduction Technology

Smelter Technology

Productivity Increase at Soral Smelter p. 153
Nordural: A Fast-Track Modular Smelter p. 159

Modernization of S 175-M2 Prebaked Pots p. 171
Design of Feeding Busbar System p. 177
Starving of Soderberg Cells from Anode Paste Before Replacement to Prebaked Anode Cells p. 181

Materials Performance in Smelters
Erosion of Cathode Blocks in 180 kA Prebaker Cells p. 187
Interactions of Alkalimetal with Cathode Carbon p. 193
Erosion Mechanisms in Smelters Equipped with Graphite Blocks--A Mathematical Modeling Approach p. 199
Experimental Investigation of Frost Heaving in Aluminum Reduction Cells Using a Water Model p. 207
Chemical Resistance of Sidelining Materials Based on SiC and Carbon in Cryolitic Melts--A Laboratory Study p. 215
Filling Alumina Silos by Use of Anti Segregation Tubes (ASTs) p. 223
Cathode Refractory Materials for Aluminium Reduction Cells p. 231
Environmental
The Electrode Kinetics of Perfluorocarbon (PFC) Generation p. 241
Spectrum Analysis of the Bubbling Acoustic Signals Through Carbon Anodes p. 247
Pot Gas Fume as a Source of HF Emission From Aluminium Smelters--Laboratory and Field Investigations p. 255
Ventilation of Potrooms in Aluminium Production p. 263
Treatment and Reuse of Spent Pot Lining, an Industrial Application in a Cement Kiln p. 269
Control of Reduction Lines
Reduction Cell Automation: Improvements of the Aluminium Smelter in Poland p. 279
Eliminating Anode Effects p. 285
Point Feeding for Constant Alumina Concentration in Soderberg Cells p. 289
Improved Concept of Alumina-Feeding Strategy p. 293
Automatic Determination of Metal Height in Electrolysis Cells p. 297
The Pechiney Semi-Continuous and Automatic Measurement Device (CMD), a New Tool for Automatic Measurements p. 303
Real Time Simulator Tool for Training and Development in Reduction Cells p. 311
Prediction and Validation of Performance
Why 'Best' Pots Operate Between 955 and 970[degree]C p. 319
Instability Mechanisms in Aluminium Reduction Cells p. 327
Eigenmodes and Interface Description in a Hall-Heroult Cell p. 333
Dimensioning of Cooling Fins for High-Amperage Reduction Cells p. 339
Dynamic Ledge Response in Hall-Heroult Cells p. 347
Three Dimensional Model for Current Efficiency Based on the Rate of Aluminium Transfer to Anode p. 353
Side Lining Effects on Thermal Behavior of Prebaked Aluminum Cell p. 359
Emerging Technologies
Path for Aluminium Production in the New Millenium p. 367
Inert Electrodes in Aluminium Electrolysis Cells p. 369
A Dynamic Inert Metal Anode p. 377
Reduction Conditions Encountered in Cryolite Baths p. 383
Wetting of TiB[subscript 2]-Carbon Material Composite p. 389
Cathodes Wetted by Aluminum Improve Current Efficiency p. 395
Aluminum-Silicon Carbothermal Reduction Using High-Temperature Solar Process Heat p. 399

Investigation of the Concentration of the Inert Anodes in the Bath and Metal During Aluminium Electrolysis p. 407

Fundamental Studies

A Two Electron Process Producing CO and a Four Electron Process Producing CO$_2$ During Aluminium Electrolysis p. 415

The Kinetics and Mechanism of the Electrode Reactions in Aluminium Electrolysis p. 423

Viscosity of Oxyfluoride Melts Relevant to the Deterioration of Refractory Linings in Aluminium Reduction Cells p. 431

Laboratory Characterization of Refractory-Cryolitic Bath Interactions p. 437

Activity of Alumina in the System NaF-AlF$_3$-Al$_2$O$_3$ at NaF/AlF$_3$ Molar Ratios Ranging from 1.4 to 3 p. 445

Lowering the Anodic Over Voltage by Doping the Carbon Anodes in Aluminium Electrolysis p. 453

Activities in the System KF-AlF$_3$ p. 461

Dissolution of Alumina in Molten Cryolite (A Video Recording Study) p. 467

Carbon Technology

Raw Material production and Qualifying Plant Evaluation of Coal Tar/Petroleum Pitch Anode Binder p. 477

Delayed Coking and Calcining, The Processes p. 481

Real Density Measurement of Petroleum Coke p. 483

Plant Experience in Qualifying Raw Materials for the Carbon Plant p. 489

Ways to Improve vs Dry Anode Performance p. 497

Analytical Method for Determining Pitch and Granulometry Content of Anode Pastes p. 503

Anode Quality and Reactivity

Dust Generation and Accumulation for Changing Anode Quality and Cell Parameters p. 509

A Review and Assessment of Effects of Sodium in Hall-Heroult Cell Anodes p. 517

The Effect of Sodium Salts on Binder Coke Reactivity p. 523

Preferential Oxidation Processes in Carbons Used in the Hall Heroult Cell p. 531

Anode Plant: Retrofitting and Operation

Advances in Anode Forming p. 541

Cooling of Green Anodes After Forming p. 547

Control of Voc and Pah from an Anode Paste Plant p. 555

Exhaustion and Dry Scrubbing of Pitch Fumes, an Environmental Problem at Albras p. 561

Conversion of a Closed Furnace to the Open Type Technology at Aluminium Bahrain p. 567

Methods to Predict Flue Life and Flue Failure Rates in Anode Baking Furnaces p. 573

Flue Gas Management p. 579

Cathode Material and Corrosion

Production and Performance Aspects of Ramming Paste p. 587

Carbonaceous Gluing Pastes p. 595

Evaluation of Contact Resistance Between Rodding Mix and Collector Bar by Using A 1/5 p. 603

Scale of Cathode Carbon Computer Simulation of the Anthracite Calcining Furnace p. 609
Graphitized Cathodes with Increased Abrasion Resistance p. 617
Carbon Cathode Corrosion by Aluminium Carbide Formation in Cryolitic Melts p. 621
Effects of Carbon-Bonded Coatings on Sodium Expansion of the Cathode in Aluminium Electrolysis p. 629
Cast Shop Technology
Molten Metal Processing/Degassing
Gas Fluxing of Molten Aluminum--Part I: Hydrogen Removal p. 641
Alpur Ts, the Solution for Low Cost Degassing and Filtration p. 649
Operating Experience with the Cast House Trough Reactor p. 653
Bubble Size and Removal Rate of Sodium in Impeller Stirred Refining Reactors p. 657
Hydrogen Removal from Aluminium in Co-Current and Counter-Current Bubble Columns p. 663
Molten Metal Processing/Grain Refining I
The Grain Refinement of Al7Si Alloys with Boron Containing Refiners p. 673
Grain Refining of Al-7wt%Si Alloys p. 679
The Effects of Growth Restriction and Effective Nucleant Potency on Grain Size and Morphology in Al-Si And Al-Cu Alloys p. 685
Grain Refinement of Hypoeutectic Al-Si Foundry Alloys with TiBloy p. 693
Hydloy--A New Alloy and Method for Grain Refining of Aluminum p. 699
Studies on the Dissolution of Al-Ti-C Master Alloy Using LiMCA II p. 705
A Kinetic Study of Demagging of Molten Aluminum by the Use of SiO[subscript 2] Submerged Powder Injection p. 711
DC Casting/Modeling I
Interpretation of Measured Temperatures and the Bleed Out Phenomenon of Billet Casting Applying the Mathematical Model Alsim p. 721
Determination of the Thermal Boundary Conditions During Aluminum DC Casting from Experimental Data Using Inverse Modeling p. 729
Mechanisms of Surface Formation During Direct Chill (DC) Casting of Extrusion Ingots p. 737
Coupled Stress, Thermal and Fluid Flow Modelling of the Start-up Phase of Aluminium Sheet Ingot Casting p. 743
Effect of As-Cast Microstructure and Subsequent Processing on Banding in Rolled Al-Sheets p. 749
Time-Dependent Rheology of Semisolid Metal Suspensions p. 755
Molten Metal Processing/Grain Refining II
An Evaluation of Metal Cleanliness and Grain Refinement of 5182 Aluminum Alloy DC Cast Ingot Using Al-3%Ti-0.15%C and Al-3%Ti-1%B Grain Refiners p. 763
Factors Influencing the Effectiveness of the Al-Ti-C Grain Refiner Alloy System p. 773
ALTiC Grain Refiners with Nucleation Power p. 779
Experimental Investigations of the Effect of Various Alloying Elements on As-Cast Grain Size of Wrought Al-Alloys p. 787
Secondary Dendrite Arm Coarsening During Chemical Grain Refinement in Some Light Metal Alloys p. 793
Correlation Between Grain Refining Efficiency and Microstructure in Ti-B-Al Master Alloys p. 797
Effect of Grain Refiners on Intermetallic Phases in AA1XXX Simulated DC Castings p. 803
