

Preface

Editor's Biography

Program Organizers

Aluminum Committees

The Aluminum Industry - Perspectives on our Future

Organizer

Challenges and Opportunities Relative to Increased Usage of Aluminum within the Automotive Industry

Alumina and Bauxite

Organizers

Development of Particle Breakdown and Alumina Strength during Calcination

Effect of Environmental Light on the Raman Spectrum of Sodium Aluminate Liquors

Effect of Na<sub>2</sub>O on Alumina Leaching and Self-Disintegrating Property of Calcium Aluminate Slag

Improvement of Product Quality in Circulating Fluidized Bed Calcination

Segregation of Alumina - The Challenge for the Aluminium Industry

Unique High-Temperature Facility for Studying Organic Reactions in the Bayer Process

Technology Solutions to Increase Alumina Recovery from Aluminogothitic Bauxites

New Polymers for Improved Flocculation of High DSP-Containing Muds

Some Aspects of Tricalcium Aluminate Hexahydrate Formation on the Bayer Process

Study on Ore Dressing and Characterization of Different Granulometric Fractions that Compound Bauxite from Pará/Brazil

Autoclave Desilication of Digested Bauxite Slurry in the Flashing Circuit

The Effect of Anatase and Lime on the Transformation of Sodalite to Cancrinite in Bayer Digestion at 250° C

Study on the Rheological Behavior of Crystallized and Crystallized - Amorphous Bauxites

Effect of Digesting Conditions on Physical Properties of Diaspore Red Mud

Extracting Alumina from Coal Flyash through Sodium Aluminate Solution in Sodalizing and Acid-leaching Process

Improved Performance of Red Mud Settlers at Worsley Alumina

Redundancy of Security Filtration

Tricalcium Aluminate Hexahydrate (TCA) Synthesis and Characterization

Effect of Carbide Slag on High Pressure Digestion Properties of Diaspore

Bauxite Characterization and Handling

Reduction Roasting and Fe-Al Separation of High Iron Content Gibbsite-type Bauxite Ores

Study and Application of an Improved Sintering Process with Pre-drying of Raw Material Slurries

The Black Bauxite

Bayer Process and Soda-Lime Sintering Process of Special Diasporic Bauxite with High Silica

Industry Trends and Issues

Benefit-Cost Analysis at an Alumina Refinery of Public Sector

Heat Transfer in the Bayer Process

Sustainable Bauxite Mining - A Global Perspective

The Need for Energy Efficiency in Bayer Refining

UC Rusal vs. Chalco, in Bauxite and Alumina

A Case for Replication of Alumina Plants

Alumina Precipitation

Study on the Precipitation Kinetics for Improving the Quality of Alumina with Regard to Fines and Attrition Properties

Wet Oxidation of Bayer Liquor Organics: Reaction Mechanisms

The Roles of Adsorption in Hydrate Precipitation

Influence of Decomposition Parameters on the Formation Rate of New Crystallizations Centers of Aluminium Hydroxide

The Microstructure of Aluminum Hydroxide Powders

Aluminum Reduction Technology

Organizers

Aluminium Smelter: Environment, Health and Safety

Modern Potline Gas Treatment Technology for High Amperage Pots - The Alcoa Fjardaal Experience

Heat Recovery from the Exhaust Gas of Aluminum Reduction Cells

Increased Energy Efficiency and Reduced HF Emissions with New Heat Exchanger

Reduction Line-5 DC Electrical Hazard

2008 Global Anode Effect Survey Results

The Applicability of Carbon Capture and Sequestration in Primary Aluminium Smelters

Application of a Method for the Determination of Pfc Emissions During Aluminum Pot Startup

Dissolution Behavior of Aluminum Dross in Aluminum Electrolyte

Aluminium Smelter: Equipment

Improving Heat Dissipation and Cell Life of Aged Reduction Lines at Aluminium Bahrain (Alba)

Update on the Evaluation of HF Emission Reduction Using Covered Anode Trays

Automated Anode Gauging

Keeping the Pace of Continuous Improvement by Retrofitting Pot Tending Machines

New Concepts for Bulk Materials Plants for the Aluminium Producing Industry - From Raw Material Receiving to Electrolysis Cells

Alfeed, a New Alumina Feeding System to Aluminium Pots

Electrolysis Pot J Hooks New Design: Positive Impacts on Performance and Environment

Cleaning and Maintenance of Crucibles and Siphons/Tubes

Erosion of Ferrous Alloys by Liquid Aluminum

Hall-Héroult Cell: Technology

Development of the AP39: The New Flagship of AP Technology

DX Pot Technology Powers Green Field Expansion

New Logistic Concepts for 400 and 500 kA Smelters

The Pot Technology Development in China

The Newly Advancement of SY400 Pot

Successful Commercial Operation of NEUI400 Potline

Continues Advancement in Lanzhou Smelter

Baking Start-up and Operation Practices of 400kA Prebaked Anode Pots

Hall-Héroult Cell: Energy Conservation Through Cell Design and Process Improvements

Wettable Anodes: An Update

Wettability of Liquid Aluminum on Carbon/Graphite/TiB<sub>2</sub> Composite Cathode Materials

Study on the New Reduction Technology for Energy Saving

Effect of Atmosphere-Changing Sintering on the Corrosion Resistance of 17Ni/(10NiO-NiFe<sub>2</sub>O<sub>4</sub>) Cermet Inert Anode

Liquidus Temperatures of Cryolite Melts with Low Cryolite Ratio

Industrial Test of Low-voltage Energy-saving Aluminum Reduction Technology

New Cathodes in Aluminum Reduction Cells

Calculation of the Aluminum Flow Field at the Interface of Molten Aluminum and Electrolyte in the New Cathode Aluminum Cells

Hall-Héroult Cell: Processes Modeling and Aluminium Smelter Modeling

Mathematical Modeling of Aluminum Reduction Cell Potshell Deformation

The Use of CFD Simulations to Optimise Ventilation of Potrooms

Safe and Efficient Traffic Flow for Aluminum Smelters

Development and Application of an ANSYS based Thermo-Electro-Mechanical Anode Stub Hole Design Tool

Design of a Bypass Joint for the Aluminum Reduction Cells

3D Freeze Shape Study of the Aluminum Electrolysis Cells Using Finite Element Method

Hall-Héroult Cell: Processes Modeling and Measurements

CFD Modelling of Effect of ACD and Anode Size on Alumina Mixing in Aluminium Reduction Cells

Terminating Anode Effects by Lowering and Raising the Anodes - A Closer Look at the Mechanism

Bath Temperature Inference through Soft Sensors using Neural Networks

The Determination of Pot Current Distribution by Measuring Magnetic Fields

Busbar Circuit Design and Installation for Boosting Already Boosted Pots

Study of Surface Oscillation of Liquid Aluminum in 168kA Aluminum Reduction Cells with a New Type of Cathode Design

Modelling and Optimization of Busbar Configuration in Aluminum Electrolysis Cell with Genetic Algorithm

Hall-Héroult Cell: Process Control

Continuous Improvement in Aluminium Reduction Cell Process Performance with the ALPSYS Control System

A Nonlinear Model Based (NMPC) Control Strategy for the Aluminium Electrolysis Process

CVG-venalum Potline Control and Supervisory Integrated System VEN-PCISIS

Efficient Thermal Balance Strategy Developed by CVG Venalum

Usage of Fuzzy Logic as a Strategy for the Aluminium Fluoride Addition in Electrolytic Cells

Development and Application of a Multivariate Process Parameters Intelligence Control Technology for Aluminum Reduction Cells

Hall-Héroult Cell: Raw Materials and Process Control

Rapid, Non-Destructive Analysis of % Gibbsite in Smelting Grade Alumina

Aluminum Fluoride - A Users Guide

Alumina Dissolution Rate as Impacted by Ore Pre-treatments

Processing of Anode Cover Material

Statistical Investigation and Modeling of Bath Level in Hall-Héroult Cells

In Situ Raman Experimental Study of Ionic Species in Cryolite Melts of Various Composition

In Situ Cell Control

Determination of Cryolite Ratio of Aluminum Electrolytes

Aluminum Rolling

Organizer

Grain Interactions and Dislocation Density Evolution during Channel Die Compression of Aluminum

Impact of Solute State and Precipitations on the Properties of 8xxx Alloys after Cold Rolling and Recrystallization

Expert5i - Intelligent Software Solution for Yield Optimization along the Production Line of Aluminium Flat Rolled Products

Possibilities of Laser Measurement for Aluminum Processing

Cast Shop for Aluminum Production

Organizers

Grain Refinement, Alloying, Solidification and Shape Casting

On the Mechanism of Grain Refinement by Ultrasonic Melt Treatment in the Presence of Transition Metals

Impurities in Al-5Ti-1B (wt.%) Grain Refiner Rod

Effects of Cooling Rate on Microstructure in En-Ac43000 Gravity Castings and Related T6 Mechanical Properties

Evaluation of Transient Heat Transfer Coefficient Evolution in EN43000 Gravity Castings towards Steel Chills with Different Interface Conditions

Furnace Technology and Melt Handling

Influence of Heating Technology on Melt Quality in Ladles for Road Transportation of Liquid Aluminum Casting Alloys during Holding

Crucible Transfer by Siphoning: A Review of the Benefits and the Latest Technology

Energy Efficiency in Casthouse Furnaces

Establishing Operational Parameters of AL-EMS using Numerical Simulations to Promote Energy Efficiency during Final Heating in Aluminum Furnaces

Retrofitting Aluminum Melting Furnaces

Implementation of a Global Casthouse Furnace Energy Efficiency Program at Rio Tinto Alcan

Degreasing of Aluminium Turnings and Implications for Solid-State Recycling

Heating and Melting of Single Al Ingots in an Aluminium Melting Furnace

Optimised Re-melting by the Use of Low-temperature Oxyfuel at Hydro Aluminium's Primary Aluminium Casthouse, Övre Årdal, Norway

Direct Chill and Conveyor Casting

Microsegregation of Direct Chill Ingot of Super High Strength Aluminum Alloy Cast from Heavily Electromagnetically Stirred Melt

Utilizing Safety Pit Coating Repair Kits to Prevent Production Stoppages

Effect of Application of Out-Of-Phase Electromagnetic Field on Horizontal Direct Chill Casting of 7075 Aluminum Alloy

Next Generation of Almex Direct Chill Tooling Systems

Thermal Assessment of the Casting Operation at IMASA Shop

Cast House Productivity and Strip Casting

Means of Improving Casthouse Productivity

Estimating the Production Capabilities of Casthouse Equipment Configuration Options

Electrochemical Characterization of Trc 7072aa for Heat Exchangers

Influence of the Cooling Water Temperature on Productivity and Product Quality in Twin Roll Casting with Copper Shells

The Use of Copper Shells by Twin Roll Strip Casters

A TEM Study of the Microstructures of 3003 and 3003-Zr Alloys Produced by Twin Roll Casting

Casthouse Design for the Production of Air-Cooled, Low-Profile Aluminium Sows

The Measurement of Heat Flow within a DC Casting Mould

Melt Oxidation, Inclusions and Hydrogen

Formation of the Solid Layer on the Top of Molten Aluminum

Removal of Solid Inclusions from Molten Aluminium through Ceramic Foam Filtration

Strategies to Reduce Inclusion Input during Liquid Metal Transportation and Melt Distribution while DC Casting of Al Alloys

A New Multi Stage System of Filtration Employing a Cyclone

Hazards Associated with the Use of Bone Ash in Contact with Molten Aluminum

In-Situ Measurement of Dissolved Hydrogen during Low Pressure Die Casting of Aluminium

Electrode Technology for Aluminum Production

Organizers

Cathodes - Materials and Operation

Carburization Phenomenons At The Cathode Block/Metal Interface

Erosion Measurements of High Density Cathode Block Samples Through Laboratory Electrolysis with Rotation

Thermo-Mechanical Characterisation of Graphitic and Graphitized Carbon Cathode Materials Used in Aluminium Electrolysis Cells

Electrical Resistance of Graphitic and Graphitized Cathode Materials at Elevated Temperatures

Development of High Density Graphitized Cathode Blocks for Aluminium Electrolysis Cells

Sodium Diffusion in Cathode Lining in Aluminium Electrolysis Cells

Characterization of Sodium Expansion of Industrial Graphitic and Graphitized Cathodes

Corrosion Resistance of Cathode to NaF-KF- $AlF_3$ -Based Electrolyte

Development Status of Processing Technology for Spent Potlining in China

Non-Carbon Materials in Cathodes

Lower Aluminium Production Cost through Refractory Material Selection

Chemical Degradation Map for Sodium Attack in Refractory Linings

Reactions in the Bottom Lining of Aluminium Reduction Cells

Sidewall Materials for the Hall-Heroult Process

Excellent Cryolite Resistance and High Thermal Conductivity SiC Sidewall Material for High-amperage Aluminium Reduction Cells

Structure Design and Deformation Measurements of C/TiB<sub>2</sub> Function Gradient Materials for Aluminum Reduction Cathode

Electrolysis Expansion Performance of TiB<sub>2</sub>-C Composite Cathode in [K<sub>3</sub>AlF<sub>6</sub>/Na<sub>3</sub>AlF<sub>6</sub>]-AlF<sub>3</sub>-Al<sub>2</sub>O<sub>3</sub> Melts

Traditional and Inert Anode Materials

Higher Softening Point Pitch as Anode Binder Pitch

Study of Resistivity - Real Density Correlation in CPC Calcination Control

The Comparison between Vertical Shaft Furnace and Rotary Kiln for Petroleum Coke Calcination

Prebaked Anode from Coal - Utilization of Coal Extract as a Coke Feedstock

Charcoal in Anodes for Aluminium Production

Ball-milled Materials as Inert Anodes for Aluminum Production in KF-AlF<sub>3</sub> Lowtemperature Electrolyte

Corrosion Behaviors of NiFe<sub>2</sub>O<sub>4</sub>-NiO-Co<sub>3</sub>O<sub>4</sub> Inert Anodes Materials in Na<sub>3</sub>AlF<sub>6</sub>-Al<sub>2</sub>O<sub>3</sub> Melts

Effect of Sintering Parameters on Properties of 18NiO-17(Cu-Ni)-65NiFe<sub>2</sub>O<sub>4</sub> Composite Ceramic Anode

Research on Preparation and Properties of 18NiO-NiFe<sub>2</sub>O<sub>4</sub> Composite Ceramic Inert Anodes

Effect of Adding Ni-Fe on Properties of Inert Anodes of NiFe<sub>2</sub>O<sub>4</sub> Based Cermet

Anode Green Mill

Use of Eddy Current Separator in Butts Processing

From Technology Development to Successful Start-Up and Operations of Sohar: The Potential of the Bi-Eirich Mixing Line

New Design of Process Area Based on Math Modelling and Simulation for Buss Kneader Principle in the Application of Green Anode Paste Preparation

Aluchemie Back to Benchmark

Successful Start up of the Combined Rhodax and IMC Processes at the Sohar Smelter

AmeliosÖ, A Performance Analysis Tool for Green Anode Plant

Anode Paste Plants: Innovative Solution for Optimum Emission Performances

Anode Baking/Anode Properties

On the Logistics of Rebuilding an Anode Baking Furnace while Maintaining Operation

Specific Energy Consumption in Anode Bake Furnaces

Desulphurisation Control during Anode Baking, its Impact on Anode Performance and Operational Costs-Alba's Experience

Systemic Analysis of Flue Wall Bricks Used in Anode Baking Furnaces

Development of a New Improved Dry Alumina Scrubber for Emission Control from Anode Bake Furnaces

Baked Anode Density Improvement through Optimization of Green Anode Dry Aggregate Composition

Characterization of Surface Topography on Carboxy Reactivity Residue

Preheating and Operational Aspects

Loss in Cathode Life Resulting from the Shutdown and Restart of Potlines at Aluminum Smelters

Evaluation of Mothballing and Subsequent Restarting of Søderberg Cells

Investigation of the Impact of Pre-Heating, Start-Up and Early Operation on Potlife

Analysis of the Coke Bed Preheating Method for Aluminium Cells

The Combined Flame and Aluminum Preheating Method

Cell Preheat on Full Line Current at Dubal

Optimization of the Anode-Stub Contact: Material Properties of Cast Iron

Voltage Drop at the Stub-anode Connection as Related to the Carbon Equivalent of the Cast Iron Collar
