Introduction  
Isolation and Enumeraton of Anaerobic and Microaerophilic Bacteria in Aquatic Habitats  
Isolation and Cultivation of Hyperthermophilic Bacteria from Marine and Freshwater Habitats  
Isolation of Psychrophilic Bacteria  
Isolation and Characterization of Bacteriocytes from a Bivalve-Sulfur Bacterium Symbiosis  
General Techniques for the Isolation and Culture of Marine Protists from Estuarine, Littoral, Psammolittoral, and Sublittoral Waters  
Long-Term Culture of Marine Benthic Protists  
Behavior and Bioenergetics of Anaerobic and Microaerobic Protists  
Culturing Free-Living Marine Phagotrophic Dinoflagellates  
Enrichment, Isolation, and Culture of Free-Living Heterotrophic Flagellates  
Determination of Pressure Effects on Flagellates Isolated from Surface Waters  
Isolation, Cloning, and Axenic Cultivation of Marine Ciliates  
Isolation and Laboratory Culture of Marine Oligotrichous Ciliates  
Extraction of Protists in Aquatic Sediments via Density Gradient Centrifugation  
Statistical Analysis of Direct Counts of Microbial Abundance  
Enumeration and Isolation of Viruses  
Total Count of Viruses in Aquatic Environments  
Improved Sample Preparation for Enumeration of Aggregated Aquatic Substrate Bacteria  
Direct Estimates of Bacterial Numbers in Seawater Samples Without Incurring Cell Loss Due to Sample Storage  
Total and Specific Bacterial Counts by Simultaneous Staining with DAPI and Fluorochrome-Labeled Antibodies  
Use of RFLPs for the Comparison of Marine Cyanobacteria  
Use of High-Resolution Flow Cytometry to Determine the Activity and Distribution of Aquatic Bacteria  
Phytoplankton Analysis Using Flow Cytometry  
Enumeration of Phototrophic Pieoplankton by Autofluorescence Microscopy  
Estimating Cell Concentration and Biomass of Autotrophic Plankton Using Microscopy  
Preservation and Storage of Samples for Enumeration of Heterotrophic Protists  
Staining of Heterotrophic Protists for Visualization via Epifluorescence Microscopy  
A Quantitative Protargol Stain (QPS) for Ciliates and Other Protists  
Preparation of Pelagic Protists for Electron Microscopy  
A Rapid Technique for the Taxonomy of Methanogenic Bacteria: Comparison of the Methylreductase Subunits  
Extraction of DNA from Soils and Sediments  
Detecting Gene Sequences Using the Polymerase Chain Reaction  
Quantitative Description of Microbial Communities Using Lipid Analysis
The Relationship Between Biomass and Volume of Bacteria p. 303
Measurement of Carbon and Nitrogen Biomass and Biovolume from Naturally Derived Marine Bacterioplankton p. 319
Use of Color Image Analysis and Epifluorescence Microscopy to Measure Plankton Biomass p. 327
Determination of Size and Morphology of Aquatic Bacteria by Automated Image Analysis p. 339
Analysis of Microbial Lipids to Determine Biomass and Detect the Response of Sedimentary Microorganisms to Disturbance p. 347
Total Microbial Biomass Estimation Derived from the Measurement of Particulate Adenosine-5’-Triphosphate p. 359
Microphytobenthic Biomass Measurement Using HPLC and Conventional Pigment Analysis p. 369
Microphotometric Analysis of the Spectral Absorption and Fluorescence of Individual Phytoplankton Cells and Detrital Matter p. 377
Measurement of Elemental Content and Dry Weight of Single Cells: X-Ray Microanalysis p. 387
Microautoradiographic Detection of Microbial Activity p. 397
Evaluating Bacterial Activity from Cell-Specific Ribosomal RNA Content Measured with Oligonucleotide Probes p. 415
Use of Fluorogenic Model Substrates for Extracellular Enzyme Activity (EEA) Measurement of Bacteria p. 423
Photoassimilation of Acetate by Algae p. 433
Starvation-Survival Strategies in Bacteria p. 441
Community Respiration Measurements Using a Pulsed O[subscript 2] Electrode p. 447
Sediment Community Production and Respiration Measurements: The Use of Microelectrodes and Bell Jars p. 455
Distinguishing Bacterial from Nonbacterial Decomposition of Spartina alterniflora by Respirometry p. 465
Microbial RNA and DNA Synthesis Derived from the Assimilation of [2, [superscript 3]H]-Adenine p. 471
Adenosine Triphosphate (ATP) and Total Adenine Nucleotide (TAN) Pool Turnover Rates as Measures of Energy Flux and Specific Growth Rate in Natural Populations of Microorganisms p. 483
Estimating Production of Heterotrophic Bacterioplankton via Incorporation of Tritiated Thymidine p. 495
Thymidine Incorporation into DNA as an Estimate of Sediment Bacterial Production p. 505
Leucine Incorporation as a Measure of Biomass Production by Heterotrophic Bacteria p. 509
Estimating Conversion Factors for the Thymidine and Leucine Methods for Measuring Bacterial Production p. 513
